acquiring and or licensing works which are at the core of the business of communicating The Treatment of Digital
Copyright Works, with Specific Reference to the Role of Collecting Societies and the Online Licensing of Multimedia Products
Alex Morrison, 2005 Digital technology facilitates the conversion of protected works into a single data format making the
different categories of work virtually indistinguishable This homogeneity of data also permits the display of different kinds of
works on the same platform a phenomenon widely known and incorrectly described as multimedia Until recently multimedia
works were manufactured almost entirely in CD ROM or floppy disc format however an increasing number of multimedia
works are being produced as Internet software This changes the technical as well as the legal nature of software products
bringing them closer to the true meaning of multimedia which will become clearer later on The technical convergence that
made digitisation possible also created the Internet infrastructure which would permit the instantaneous delivery of
multimedia products Unfortunately the convergence of legal rules required for the effective administration of copyright is

lagging behind technological convergence and thereby impeding the development of the Information Society For many years the development of multimedia products was held up by a marketing bottleneck which increased the length of the product development life cycle However with the emergence of Internet technologies especially the World Wide Web this bottleneck has almost disappeared The licensing of multimedia products has always been complex due to the different rules governing copyright in particular media and the large number of rights involved in multimedia compilations These rights are currently administered by a bureaucratic system run mostly by national collecting societies and publishing companies One of the main consequences of this is that authorisation must be sought in respect of each copyright work used in a multimedia product a process which is so complex and financially risky as to prevent the production of many multimedia products Copying technologies that make reproduction of copyright works almost effortless along with network technologies which give almost instantaneous access to digitised copyright works aggravate this situation While collecting societies may regard the system of exclusive rights which prevails in Europe as a great achievement Those in the emergent multimedia industry regard this as an obstacle and are therefore calling for the introduction of compulsory licensing
