The Meaning of If Justin Khoo, 2022 Despite its small stature it occupies a central place both in everyday language and the philosophical lexicon In allowing us to talk about hypothetical situations it raises a host of thorny philosophical puzzles about language and logic Addressing them requires tools from linguistics logic probability theory and metaphysics Justin Khoo uses these tools to navigate a maze of interconnected issues about conditionals some of which include the nature of linguistic communication the relationship between logical and natural languages and the relationship between different kinds of modality According to Khoo's theory conditionals form a unified class of expressions which share a common semantic core that encodes inferential dispositions Thus rather than represent the world conditionals are devices used to communicate how we are disposed to infer Khoo shows that this theory can be extended to predict the probabilities of conditionals as well as how different kinds of conditionals differ both semantically and pragmatically Khoo's book will make for a significant contribution to the literature on conditionals and should be of interest to philosophers linguists and computer scientists

Scientific Method Barry Gower, 2012-10-12 The central theme running throughout this outstanding new survey is the nature of the philosophical debate created by modern science's foundation in experimental and mathematical method More recently recognition that reasoning in science is probabilistic generated intense debate about whether and how it should be constrained so as to ensure the practical certainty of the conclusions drawn These debates brought to light issues of a philosophical nature which form the core of many scientific controversies today

Scientific Method A Historical and Philosophical Introduction presents these debates through clear and comparative discussion of key figures in the history of science Key chapters critically discuss Galileo's demonstrative method Bacon's inductive method and Newton's rules of reasoning the rise of probabilistic Bayesian methods in the eighteenth century the method of hypotheses through the work of Herschel Mill and Whewell the conventionalist views of Poincaré and Duhem the inductivism of Peirce Russell and Keynes Popper's falsification compared with Reichenbach's enumerative induction Carnap's scientific method as Bayesian reasoning The debates are brought up to date in the final chapters by considering the ways in which ideas about method in the physical and biological sciences have affected thinking about method in the social sciences This debate is analyzed through the ideas of key theorists such as Kuhn Lakatos and Feyerabend
