## **Daylighting Natural Light In Architecture:**

*Daylighting* Derek Phillips, 2012-05-23 Daylighting offers a general theory and introduction to the use of natural light in architecture The fourth of Derek Phillip s lighting books draws on his experience to illustrate how best to bring natural light into building design As sustainability becomes a core principal for designers daylighting comes to the fore as an alternative to artificial energy consuming light Here Phillips makes a rational argument for considering daylight first outlining the arguments in favour of a daylight approach and goes on to show through a series of beautifully illustrated case studies how architects have created buildings in which natural light has been shown to play a major strategic role in the development of the design of a building

**Illuminating** Michelle Corrodi, Klaus Spechtenhauser, 2014-03-12 The image of open working and living spaces flooded with light has more than any other become fixed in our minds as a symbol of modernity and the spirit of the times While the workplace has always been the focus of ergonomic studies and optimization with respect to a good provision of daylight large glass surfaces have now become the order of the day for living spaces as well But does this automatically make for better illumination Taking this question as its starting point the publication *Illuminating* thematizes central aspects of light planning including the connection between the provision of daylight and architectural design building orientation the nature of the facade the ground plan comfort and the proportions and atmosphere of rooms In the process general characteristics and fundamental principles as well as subtle facets of an intelligent treatment of daylight are discussed and critically examined within an expanded architecture and culture historical context

*Natural Light* Hestia Thornbrook, 2025-01-04 *Natural Light* offers a comprehensive exploration of daylight s crucial role in architectural design and human well being addressing the growing disconnect between modern indoor living and our biological need for natural illumination The book uniquely bridges scientific understanding with practical architectural solutions examining how natural light impacts both human health and sustainable building design Through a careful blend of historical context and contemporary research it demonstrates why proper daylighting is not merely an aesthetic choice but a fundamental aspect of human centric architecture The work progresses logically through three main sections beginning with the scientific principles of natural light and its biological effects moving to architectural strategies illustrated through real world case studies and concluding with practical implementation methods for both new construction and renovations Drawing from peer reviewed research in chronobiology and architectural studies the book presents compelling evidence for the importance of natural light in building design while offering specific solutions for common challenges such as light redirecting systems and smart glazing technologies What sets this resource apart is its accessible approach to complex technical concepts making it valuable for both professionals and informed homeowners The book addresses specific challenges across different climate zones and urban contexts providing detailed guidelines for window placement glazing selection and interior layout optimization By connecting architecture with environmental psychology and energy conservation it offers a holistic

perspective on creating naturally lit environments that enhance both building performance and occupant well being The Architecture of Light Mary Ann Steane,2011 Reviewing the use of natural light by architects in the era of electricity this book aims to show that natural light not only remains a potential source of order in architecture but that natural lighting strategies impose a usefully creative discipline on design Considering an approach to environmental context that sees light as a critical aspect of place this book explores current attitudes to natural light by offering a series of in depth studies of recent projects and the particular lighting issues they have addressed It gives a more nuanced appraisal of these lighting strategies by setting them within their broader topographic climatic and cultural contexts *Advances in Utopian Studies and Sacred Architecture* Claudio Gambardella,Claudia Cennamo,Maria Luisa Germanà,Mohd Fairuz Shahidan,Hocine Bougdah,2021-02-02 At a time dominated by the disappearance of Future as claimed by the French anthropologist Marc Augé Utopia and Religion seem to be two different ways of giving back an inner horizon to mankind Therefore this book on the one hand considers the importance of utopia as a tool and how it offers an economic and social resource to improve cities wealth future and livability On the other it explores the impact of religious and cultural ideals on cities that have recently emerged in this context Based on numerous observations the book examines the intellectual legacy of utopian theory and practices across various academic disciplines It also presents discussions theories and case studies addressing a range of issues and topics related to utopia Natural Light in Architecture Ann Tracy O'Meagher,1989 Sustainable Development and Social Responsibility—Volume 1 Miroslav Mateev,Jennifer Nightingale,2020-02-13 The book presents high quality research papers presented at the 2nd American University in the Emirates International research conference AUEIRC 18 organized by the American University in the Emirates Dubai held on November 13th 15th 2018 The book is broadly divided into four sections Sustainability and Smart Technology Sustainability and Social Responsibility Sustainability Human Security and Legislation Sustainability and Education The topics covered under these sections are sustainable smart technology such as developing green curriculum for information technology use ultrasonic velocity to predict quality of wheat improve security features for visa system factors affecting the cost of production of electricity and desalination plants impact of smart traffic sensing in smart cities smart healthcare system simulation of Grey wolf optimization algorithm in painting digital forensics The topics covered for sustainability and creative industries such as sustainable concrete production multimedia applications in digital transformation art integrating biomimicry principles in sustainable architecture Sustainability human security and legislation covered topics of urban performance and sustainable environment Eco certification as response on climate change the criminal offence of tax evasion in law case study skills engineering in sustainable counter defense against Cyber extremism the international law and challenges of trans boundary water resources governance the legal status of nuclear energy case study sustainable energy development and nuclear energy legislation in UAE corruption specific safety challenge environmental management and sustainability sustainable farming models for desert agro ecosystems future directions of

climate change earth and built environment towards new concept of sustainability institution building from emotional intelligence perspective virtue ethics technology and sustainability the role of humor in a sustainable education HEIs practices and strategic decisions toward planning for sustainable education programs TQM in higher education for sustainable future The papers in this book present high quality original research work findings and practical development experiences

**Heating, Cooling, Lighting** Norbert Lechner, 2014-10-13 Sustainable environmental control through building design Heating Cooling and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design By detailing the many factors that contribute to the comfort in a building this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating cooling and lighting This new fourth edition includes new information on integrated design strategies and designing for the Tropics Resources include helpful case studies checklists diagrams and a companion website featuring additional cases an image bank and instructor materials Designing buildings that require less energy to heat cool and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems Basic design decisions regarding size orientation and form have a great impact on the sustainability cost and comfort of a building Heating Cooling and Lighting provides detailed guidance for each phase of a design project Readers will Understand the concept of sustainability as applied to energy sources Review the basic principles of thermal comfort and the critical role of climate Learn the fundamentals of solar responsive design including active and passive solar systems as well as photovoltaics Discover how siting architectural design and landscaping can reduce the requirements for mechanical and electrical systems In sustainable design mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself With this in mind designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort Heating Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control

*Sacred Buildings* Rudolf Stegers, 2008-05-16 In a systematic section this volume introduces the design technical and planning fundamentals of building churches synagogues and mosques In its project section it also presents about seventy realized structures from the last three decades

Creating Sensory Spaces Barbara Erwine, 2016-12-19 Creating Sensory Spaces celebrates spaces enlivened with sensual richness and provides you with the knowledge and tools necessary to create them Drawing on numerous built case studies in ten countries and illustrated with over 85 full color images the book presents a new framework for the design of sensory spaces including light color temperature smell sound and touch Bridging across disciplines of architecture engineering phenomenology and perceptual psychology this book informs the design of buildings and neighborhoods that reclaim the role of the body and all the senses in creating memorable experiences of place and belonging

**Lighting Design** Ulrike Brandi, 2012-12-17 A concise systematic introduction to natural and artificial lighting

design More than any building material light produces spatial effects generates moods and stages architectural designs In well lit spaces we feel good and we are capable and effective light promotes health Moreover especially in office buildings the combination of a sensible natural lighting design with a corresponding approach to artificial lighting is a decisive factor in energy conservation Assembled by experienced authors and experts from the worlds of practice and teaching this new volume in the series Detail Practice provides an introduction to the most important aspects of natural and artificial lighting design In addition to straightforward planning rules such as ground plan design building orientation and the structuring of facades it also introduces and explains current natural and artificial lighting systems with the help of example projects
