How to Draw 3D Suci Kreatif,2017-08-16 A 3D drawing is a three dimensional drawing There are a number of ways an artist can convey dimension in a drawing Perspective is one of them Shading and contouring are others It is a 3 dimensional view 2D objects only have length an width and 3d objects have an extra dimension called depth which is how far back the object goes 3D stands for in three dimensions In other words the object under discussion has width height and depth In relation to film 3 d films give you the IMPRESSION that there are three dimensions to what you are viewing when in fact there are only two on the screen There is no genuine depth to the image Whenever we look a things they are in three dimensions we see things in length height and width Drawings that are created to represent the three dimensions is called a 3 D drawing It is an object drawn on a piece of paper that shows you the perspective and shading that is used to make the drawing more realistic 3D drawings can make any drawing come to life It may seem difficult but it is actually easier than it appears
