zoo when very young is an important part of curriculum in America but as we mature we learn that zoos represent captivity and often produce undesired unhealthy results on the inhabitants This volume asks students to think critically about Earth s animals and how we treat them Essays discuss zoos and the treatment of animals in captivity covering the role of zoos in education and ensuring the survival of certain species the problem of surplus animals and how elephants react to captivity

Second Nature David J. Shepherdson, Jill D. Mellen, Michael Hutchins, 1999-05-14 Growing recognition of the complexity of animals physical social and psychological lives in the wild has led both zookeepers and the zoo going public to call for higher environmental standards for animals in captivity Bringing together the work of animal behaviorists zoo biologists and psychologists Second Nature explores a range of innovative strategies for environmental enrichment in laboratories and marine parks as well as in zoos From artificial fleeing prey devices for leopards to irregular feeding schedules for whales the practices discussed have resulted in healthier more relaxed animals that can breed more easily and can exert some control over their environments Moving beyond the usual studies of primates to consider the requirements of animals as diverse as reptiles amphibians marine mammals small cats hooved grazers and bears contributors argue that whether an animal forages in the wild or plays computer games in captivity the satisfaction its activity provides rather than the activity itself determines the animal s level of physical and psychological well being Second Nature also discusses the ways in which environmental enrichment can help zoo bred animals develop the stamina and adaptability for survival in the wild and how it can produce healthier lab animals that yield more valid test results Providing a theoretical framework for the science of environmental enrichment in a variety of settings the book renews and extends a humane approach to the keeping and conservation of animals

The End of Captivity? Tripp York, 2015-07-30 In The End of Captivity Tripp York addresses how we talk about the good of other animals in light of a stark impossibility their freedom from us While all of us in the animal and plant kingdom are interdependent upon one another humans are unique in that we are the only animals who keep other animals captive We keep animals in zoos sanctuaries circuses conservatories aquariums research facilities slaughterhouses and on our farms and in our homes York asks what such forms of captivity say about us and how animal captivity shapes what we imagine to be the purpose of other animals What does the fact that elephants tigers and horses perform in circuses say about how we see the world What does the reality of zoological parks say about the people who create support decry protest and patronize them How important is

wildlife conservation for the good of the earth What does who we put on our plate say about how we understand the theological role of other animals These are just a few questions York tackles as he weaves through the convoluted politics surrounding the captive animals in our midst
