Set Differential Equations and Flow Invariance

The study of Set Differential Equations is initiated in the metric space of nonempty, compact, convex subsets of $\mathbb{R}^n$, endowed with the Hausdorff metric. The existence of a generalized solution for the associated initial value problems is proved when the function involved does not satisfy any continuity assumptions. Utilizing the ideas of nonsmooth analysis, a proximal aiming condition is employed to investigate the weak and strong invariance for these solutions.

1. PRELIMINARIES

Let $K_c(\mathbb{R}^n)$ denote the collection of all nonempty, compact and convex subsets of $\mathbb{R}^n$. Define the Hausdorff metric

$$D[A, B] = \max\left[\sup_{x \in B} d(x, A), \sup_{y \in A} d(y, B)\right] \tag{1.1}$$

where $d[x, A] = \inf[d(x, y) : y \in A]$, A, B are bounded sets in $\mathbb{R}^n$. We note that $K_c(\mathbb{R}^n)$ with this metric is a complete metric space.

It is known that if the space $K_c(\mathbb{R}^n)$ is equipped with the natural algebraic operations of addition and nonnegative scalar multiplication, then $K_c(\mathbb{R}^n)$ becomes a semilinear metric space which can be embedded as a complete cone into a corresponding Banach space.
