*Diffusion in Solids* Helmut Mehrer, 2009-09-02 This book describes the central aspects of diffusion in solids and goes on to provide easy access to important information about diffusion in metals alloys semiconductors ion conducting materials glasses and nanomaterials Coverage includes diffusion controlled phenomena including ionic conduction grain boundary and dislocation pipe diffusion This book will benefit graduate students in such disciplines as solid state physics physical metallurgy materials science and geophysics as well as scientists in academic and industrial research laboratories

**Diffusion in Solids** Martin Eden Glicksman, 2022-09-14 This book offers a modern treatment of diffusion in solids covering such core topics as the transport of mass through the lattice of a crystalline solid Part I of the book develops basic concepts in diffusion field theory and illustrates them with several applications while Part II focuses on key solid state principles needed to apply diffusion theory to real materials

**Diffusion in Solids** Helmut Mehrer, 2007 Diffusion is a vital topic in solid state physics and chemistry physical metallurgy and materials science Diffusion processes are ubiquitous in solids at elevated temperatures A thorough understanding of diffusion in materials is crucial for materials development and engineering This book first gives an account of the central aspects of diffusion in solids for which the necessary background is a course in solid state physics It then

Diffusion in Solids A.S. Nowick, 2012-12-02 Diffusion in Solids Recent Developments provides an overview of diffusion in crystalline solids This book discusses the various aspects of the theory of diffusion Organized into nine chapters this volume starts with a discussion on the process of diffusion in solids This book then examines the tools that supplement the conventional diffusion measurements including electromigration ionic conductivity isotope effects and vacancy wind effects This text explores the molecular dynamic calculation by which the interatomic forces must be assumed Other chapters discuss the method of measurement of the isotope effect on diffusion which is the most powerful method of determining relevant information about the correlation factor This volume extensively discusses diffusion in organic and amorphous materials as well as interstitial diffusion in solids The final chapter deals with ionic motion and diffusion in various groups of materials called fast ionic conductors Solid state physicists materials scientists physical chemists and electrochemists will find this book extremely useful

**Diffusion in Solid Metals and Alloys / Diffusion in festen Metallen und Legierungen** H. Bakker, H.P. Bonzel, C.M. Bruff, M.A. Dayananda, W. Gust, J. Horvath, I. Kaur, G.V. Kidson, A.D. LeClaire, H. Mehrer, Gaeme E. Murch, G. Neumann, N. Stolica, N.A. Stolwijk, 1990-12-19 The interest in diffusion in solids is as old as physical metallurgy or materials science It stems from application oriented as well as from scientific reasons First a knowledge of diffusion is basic to an understanding of many microstructural changes that occur in solid matter at elevated temperatures For processes like phase transformations precipitation or dissolution of a second phase recrystallization oxidation creep annealing etc solid state diffusion is fundamental and ubiquitous The second reason for studying diffusion is to learn more about how atoms move in solid matter Volume III 26 presents for the first time a comprehensive collection of diffusion data for solid metals and alloys The critical compilation of data has resulted in tables and series of diagrams which show in 13 chapters data for the following properties Self and impurity diffusion in metallic elements self diffusion in homogeneous binary alloys chemical diffusion in binary and ternary alloys diffusion in amorphous alloys diffusion of interstitial foreign atoms like hydrogen carbon oxygen and nitrogen in metallic elements mass and pressure dependence of diffusion diffusion along dislocations grain and interphase boundary diffusion and diffusion on surfaces

**Diffusion in Solids and Liquids V** Andreas Öchsner, 2010 Current water treatment technologies

require considerable energy consumption Thus closely linked to the problem of water shortage is the impending energy crisis Therefore intensive research is being aimed at developing water purification processes that are based upon using renewable energy such as solar energy rather than energy generated using fossil fuels There has been an accumulation of reports on the development of photocatalysts which enable water purification using solar energy as the only driving force Such photocatalysts based upon oxide semiconductors permit the conversion of solar energy into the chemical energy that is required for the oxidation of toxic organic compounds in water The most promising photocatalyst is titanium dioxide TiO<sub>2</sub> and its solid solutions The research on TiO<sub>2</sub> photocatalysis is multidisciplinary and progress in this area requires the application of concepts of catalysis and photocatalysis as well as concepts of solid state chemistry
