David A. Aikens

Digital Electronics And Laboratory Computer Experiments:

Digital Electronics and Laboratory Computer Experiments, 1975 *Digital Electronics and Laboratory Computer Experiments* Charles Wilkins, 2012-12-06 Science undergraduates have come to accept the use of computers as commonplace. The daily use of portable sophisticated electronic calculators, some of them rivaling general purpose minicomputers in their capabilities, has hastened this development. Over the past several years, computer-assisted experimentation has assumed an important role in the experimental laboratory. Mini and microcomputer systems have become an important part of the physical scientist's array of analytical instruments. Prompted by our belief that this was an inevitable development, we began several years ago to develop the curricular materials presented in this manual. At the outset, several objectives seemed important to us. First, insofar as possible, the experiments included should be thoroughly tested and error-free. Second, they should be compatible with a variety of laboratory computer data acquisition and control systems. Third, little or no previous background in either electronics or programming should be necessary. Of course, such background would be advantageous. To satisfy these objectives, we decided to adopt a widespread high-level computer language, BASIC, suitably modified for the purpose. Furthermore, we have purposely avoided specifying any particular system or equipment. Rather, the functional characteristics of both hardware and software required are stipulated. The experiments have been developed using Varian 620 and Hewlett-Packard 2100 series computers, but we believe they are readily transferable to other commonly available computer systems with a minimum of difficulty.

Computers in Analytical Chemistry R. Belcher, 2013-10-22 This text is primarily intended for readers who have some background in chemistry and who wish to find out more about the ways in which computers and electronics are influencing the techniques of observing chemical systems, the acquisition of data, its storage, and its transmission from one location to another. Many

important concepts such as interfacing data collection data bases information services and computer networks are covered in an easily assimilated and comprehensive way *Computers in Chemical Education and Research* E. Ludena, 2013-03-09 The impact of computers on all realms of Chemistry has been one of the most important factors in the development of this science during the last years In recognition of this fact in 1971 the First International Conference on Computers in Chemical Research and Education was held at DeKalb Illinois USA A second Conference took place in Ljubljana Yugoslavia in 1973 and this third Conference in Caracas Venezuela in 1976 The aim of these conferences was to provide a high level forum for the leading researchers to exchange information at the frontiers of present day computer applications to the different fields of Chemistry The present Third International Conference on Computers in Chemical Research Education and Technology whose proceedings are published in the present volume was conceived by means of a series of invited lectures as a survey of the present state of the art in some of the most relevant areas of computer applications in Chemistry
