Human modeling and simulation can reduce the need for physical prototyping and incorporate ergonomics and human factors earlier in design processes. These models provide a representation of some human aspects that can be inserted into simulations or virtual environments and facilitate prediction of safety, satisfaction, usability, performance, and sustainability. These may consider the physiological, cognitive, behavioral, emotional, and environmental aspects. The math and science provides a foundation for visualizations that can facilitate decision making by technical experts, management, or those responsible for public policy.
