Dilation Theory, Toeplitz Operators, and Other Topics Constantin Apostol, C. M. Pearcy, B. Sz.-Nagy, D. Voiculescu, 1983

Dilation Theory, Toeplitz Operators and Other Topics Apostol, 1983 *Spectral Theory of Approximation Methods for Convolution Equations* Roland Hagen, Steffen Roch, Bernd Silbermann, 2012-12-06 The aim of the present book is to propose a new algebraic approach to the study of norm stability of operator sequences which arise for example via discretization of singular integral equations on composed curves A wide variety of discretization methods including quadrature rules and spline or wavelet approximations is covered and studied from a unique point of view The approach takes advantage of the fruitful interplay between approximation theory concrete operator theory and local Banach algebra techniques The book is addressed to a wide audience in particular to mathematicians working in operator theory and Banach algebras as well as to applied mathematicians and engineers interested in theoretical foundations of various methods in general use particularly splines and wavelets The exposition contains numerous examples and exercises Students will find a large number of suggestions for their own investigations Differentiable Operators and Nonlinear Equations Victor Khatskevich, David Shoykhet, 2012-12-06

The need to study holomorphic mappings in infinite dimensional spaces in all likelihood arose for the first time in connection with the development of nonlinear analysis A systematic study of integral equations with an analytic nonlinear part was started at the end of the 19th and the beginning of the 20th centuries by A Liapunov E Schmidt A Nekrasov and others Their research work was directed towards the theory of nonlinear waves and used mainly the undetermined coefficients and the majorant power series methods which subsequently have been refined and developed Parallel with these achievements the theory of functions of one or several complex variables was gradually enriched with more significant and subtle results The present book is a first step towards establishing a bridge between nonlinear analysis nonlinear operator equations and the theory of holomorphic mappings on Banach spaces The work concludes with a brief exposition of the theory of spaces with indefinite metrics and some relevant applications of the holomorphic mappings theory in this setting In order to make this book accessible not only to specialists but also to students and engineers the authors give a complete account of definitions and proofs and also present relevant prerequisites from functional analysis and topology Contents Preliminaries Differential calculus in normed spaces Integration in normed spaces Holomorphic analytic operators and vector functions on complex Banach spaces Linear operators Nonlinear equations with differentiable operators Nonlinear equations with holomorphic operators Banach manifolds Non regular solutions of nonlinear equations Operators on spaces with indefinite metric References List of Symbols Subject Index **Operator Theory and Complex Analysis** J. K. Aggarwal, 1993-01-22 This volume presents a set of papers based on the proceedings of the NATO Advanced Research Workshop on Multisensor Fusion for Computer Vision held in Grenoble France in June 1989 The workshop focused on the fusion or integration of sensor information to achieve the optimum interpretation of a scene The papers cover a broad range

of topics including principles and issues in multisensor fusion information fusion for navigation multisensor fusion for object recognition network approaches to multisensor fusion computer architectures for multisensor fusion and applications of multisensor fusion The authors have documented their own research and in so doing have presented the state of the art in the field Each author is a recognized leader in his or her area in the academic governmental or industrial research community Several contributors present novel points of view on the integration of information The book gives a representative picture of current progress in multisensor fusion for computer vision among the leading research groups in Europe and North America

Floquet Theory for Partial Differential Equations P.A. Kuchment, 1993-07-01 Linear differential equations with periodic coefficients constitute a well developed part of the theory of ordinary differential equations 17 94 156 177 178 272 389 They arise in many physical and technical applications 177 178 272 A new wave of interest in this subject has been stimulated during the last two decades by the development of the inverse scattering method for integration of nonlinear differential equations This has led to significant progress in this traditional area 27 71 72 111 119 250 276 277 284 286 287 312 313 337 349 354 392 393 403 404 At the same time many theoretical and applied problems lead to periodic partial differential equations We can mention for instance quantum mechanics 14 18 40 54 60 91 92 107 123 157 160 192 193 204 315 367 412 414 415 417 hydrodynamics 179 180 elasticity theory 395 the theory of guided waves 87 89 208 300 homogenization theory 29 41 348 direct and inverse scattering 175 206 216 314 388 406 408 parametric resonance theory 122 178 and spectral theory and spectral geometry 103 105 381 382 389 There is a significant distinction between the cases of ordinary and partial differential periodic equations The main tool of the theory of periodic ordinary differential equations is the so called Floquet theory 17 94 120 156 177 267 272 389 Its central result is the following theorem sometimes called Floquet Lyapunov theorem 120 267
