Dimension Estimation And Models:

Dimension Estimation And Models Howell A M Tong,1993-12-22 This volume is the first in the new series Nonlinear Time Series and Chaos The general aim of the series is to provide a bridge between the two communities by inviting prominent researchers in their respective fields to give a systematic account of their chosen topics starting at the beginning and ending with the latest state It is hoped that researchers in both communities will find the topics relevant and thought provoking In this volume the first chapter written by Professor Colleen Cutler is a comprehensive account of the theory and estimation of fractal dimension a topic of central importance in dynamical systems which has recently attracted the attention of the statisticians As it is natural to study a stochastic dynamical system within the framework of Markov chains it is therefore relevant to study their limiting behaviour The second chapter written by Professor Kung Sik Chan reviews some limit theorems of Markov chains and illustrates their relevance to chaos The next three chapters are concerned with specific models Briefly Chapter Three by Professor Peter Lewis and Dr Bonnie Ray and Chapter Four by Professor Peter Brockwell generalise the class of self exciting threshold autoregressive models in different directions In Chapter Three the new and powerful methodology of multivariate adaptive regression splines MARS is adapted to time series data Its versatility is illustrated by reference to the very interesting and complex sea surface temperature data Chapter Four exploits the greater tractability of continuous time Markov approach to discrete time data The approach is particularly relevant to irregularly sampled data The concluding chapter by Professor Pham Dinh Tuan is likely to be the most definitive account of bilinear models in discrete time to date

Rasch Measurement Theory Tejas Thakur,2025-02-20 Rasch Measurement Theory A Complete Course is a comprehensive guide to understanding Rasch measurement theory We offer an essential resource for anyone interested in measurement theory educational assessment or social science research Rasch measurement theory named after Danish mathematician Georg Rasch provides a framework for developing valid and reliable measurement instruments Unlike traditional psychometric approaches Rasch measurement theory emphasizes the principles of measurement itself At the heart of Rasch

measurement theory is the Rasch model which posits that the probability of a respondent endorsing an item on a scale depends on the relationship between the respondent's ability and the difficulty of the item. This model forms the basis for various measurement applications. We introduce the basic principles of Rasch measurement theory and provide step by step guidance on applying Rasch analysis to real world data. Our book emphasizes practical applications with examples from education, psychology and healthcare. We also explore advanced topics such as differential item functioning (DIF), multidimensional Rasch models and item response theory (IRT). Throughout the book we offer tips for conducting Rasch analysis using software packages like RUMM, Winsteps and jMetrik.

Causal Models in the Social Sciences H.M. Blalock Jr., 2017-07-28. Causal models are formal theories stating the relationships between precisely defined variables and have become an indispensable tool of the social scientist. This collection of articles is a course book on the causal modeling approach to theory construction and data analysis. H. M. Blalock Jr. summarizes the then current developments in causal model utilization in sociology, political science, economics and other disciplines. This book provides a comprehensive multidisciplinary picture of the work on causal models. It seeks to address the problem of measurement in the social sciences and to link theory and research through the development of causal models. Organized into five sections: Simple Recursive Models, Path Analysis, Simultaneous Equations, Techniques, The Causal Approach to Measurement Error and Other Complications, this volume contains twenty seven articles, eight of which were specially commissioned. Each section begins with an introduction explaining the concepts to be covered in the section and links them to the larger subject. It provides a general overview of the theory and application of causal modeling. Blalock argues for the development of theoretical models that can be operationalized and provide verifiable predictions. Many of the discussions of this subject that occur in other literature are too technical for most social scientists and other scholars who lack a strong background in mathematics. This book attempts to integrate a few of the less technical papers written by econometricians such as Koopmans, Wold, Strotz and Fisher with discussions of causal approaches in the social and biological sciences. This classic text by Blalock is a valuable source of material for those interested in the issue of measurement in the social sciences and the construction of mathematical models.

Artificial Intelligence in Real-Time Control M. G. Rodd, G. J. Suski, 2014-05-23. Artificial Intelligence in Real Time Control documents the proceedings of the IFAC Workshop held in Clyne Castle, Swansea, UK, 21-23 September 1988. It includes two keynote addresses that discussed architectural issues for expert systems in real time control: the problem of representing knowledge and reasoning and the problems encountered in obtaining such information. Other papers contained in these proceedings are representative of the major research bodies active throughout the world in the application of AI techniques in real time control, although it was inevitable that a Europe based conference would highlight the work of the European groups. While AI is clearly still in the process of establishing itself, it is undoubtedly a major new area of engineering endeavor. Practical experience is still relatively limited and many of the results discussed at this event

were obtained through simulation or in a few cases from reduced practical experience The importance though lies in the fact that many countries are pouring extensive resources into the attempt to control difficult processes by using AI techniques The wide cross section of interest was demonstrated by the fact that many diverse industries were represented at the workshop ranging from power systems control to telecommunications and into the steel industry
