## **Digital Pattern Recognition:**

*Digital Pattern Recognition* K. S. Fu, 2013-03-08 During the past fifteen years there has been a considerable growth of interest in problems of pattern recognition Contributions to the blossom of this area have come from many disciplines including statistics psychology linguistics computer science biology taxonomy switching theory communication theory control theory and operations research Many different approaches have been proposed and a number of books have been published Most books published so far deal with the decision theoretic or statistical approach or the syntactic or linguistic approach Since the area of pattern recognition is still far from its maturity many new research results both in theory and in applications are continuously produced The purpose of this monograph is to provide a concise summary of the major recent developments in pattern recognition The five main chapters Chapter 2 6 in this book can be divided into two parts The first three chapters concern primarily with basic techniques in pattern recognition They include statistical techniques clustering analysis and syntactic techniques The last two chapters deal with applications namely picture recognition and speech recognition and understanding Each chapter is written by one or two distinguished experts on that subject The editor has not attempted to impose upon the contributors to this volume a uniform notation and terminology since such notation and terminology does not as yet exist in pattern recognition

Digital Pattern Recognition King-Sun Fu, 1980 **Information Processing And Living Systems** Vladimir B Bajic, Tin Wee Tan, 2005-06-01 Information processing and information flow occur in the course of an organism's development and throughout its lifespan Organisms do not exist in isolation but interact with each other constantly within a complex ecosystem The relationships between organisms such as those between prey or predator host and parasite and between mating partners are complex and multidimensional In all cases there is constant communication and information flow at many levels This book focuses on information processing by life forms and the use of information technology in understanding them Readers are first given a comprehensive overview of biocomputing before navigating the complex terrain of natural processing of biological information using physiological and analogous computing models The remainder of the book deals with artificial processing of biological information as a human endeavor in order to derive new knowledge and gain insight into life forms and their functioning Specific innovative applications and tools for biological discovery are provided as the link and complement to biocomputing Since artificial processing of biological information is complementary to natural processing a better understanding of the former helps us improve the latter Consequently readers are exposed to both domains and when dealing with biological problems of their interest will be better equipped to grasp relevant ideas
