problem most planets orbit the sun in elliptical orbits do these planets exhibit rotational motion rotational motion has two requirements all particles must move about a fixed axis and move in a circular path since the path of most planets is not circular they do not exhibit rotational motion problem

10 2 kinematics of rotational motion openstax - Jul 17 2023

rotational kinematics just like linear kinematics is descriptive and does not represent laws of nature with kinematics we can describe many things to great precision but kinematics does not consider causes for example a large angular acceleration describes a very rapid change in angular velocity without any consideration of its cause

equation overview for rotational kinematics problems - Feb 12 2023

we have 8 ready to use problem sets on the topic of rotational kinematics these problem sets focus on the analysis of situations involving a rigid object rotating in either a clockwise or counterclockwise direction about a given point the object's rotation speed may be increasing decreasing or remaining constant

rotational kinematics in the section on uniform circular motion we discussed motion in a circle at constant speed and therefore constant angular velocity however there are times when angular velocity is not constant rotational motion can speed up

kinematics of rotational motion physics lumen learning - Jul 05 2022

evaluate problem solving strategies for rotational kinematics just by using our intuition we can begin to see how rotational quantities like θ , ω and α are related to one another for example if a motorcycle wheel has a large angular acceleration for a fairly long time it ends up spinning rapidly and rotates through many revolutions
