Towards New Ways of Terminology Description Rita Temmerman,2000-06-15 Based on an empirical study of categorisation and lexicalisation processes in a corpus of scientific publications on the life sciences Rita Temmerman questions the validity of traditional terminology theory Her findings are that the traditional approach impedes a pragmatic and realistic description of a large number of categories and terms Inspired by the cognitive sciences she develops an alternative The main principles of this new theory imply a combined semasiological and onomasiological perspective only few categories can be clearly delineated form and content of definitions vary according to category types and user s requirements synonymy and polysemy are functional in special language and a diachronic approach is unavoidable This last principle implies the varying importance of historical information in definitions the non arbitrariness of lexicalisation and the importance of cognitive models In a last chapter the author shows how the methods and principles of the alternative approach are applicable in terminography and how this is going to have an impact on software for terminological database construction This book will be valuable for specialists in terminology theory practising terminographers and for anybody interested in special language cognitive models and prototype theory **Laws and Models** Carl W. A Theory of Music Analysis Dora A. Hanninen, 2012 This book introduces a theory of music analysis that one can use to explore aspects of segmentation and associative organization in a wide range of repertoire including Western classical music from the Baroque to the present with potential applications to jazz and popular music and some non Western musics Rather than a methodology the theory provides analysts with precise language and a broad flexible conceptual framework through which they can formulate and investigate questions of interest and develop their own interpretations of individual pieces and passages The theory begins with a basic distinction among three domains of musical experience and discourse about it the sonic psychoacoustic the contextual or associative sparked by varying degrees of repetition and the structural guided by a specific theory of musical structure or syntax invoked by the analyst A comprehensive presentation of the theory with copious musical illustrations is balanced with close analyses of works by Beethoven Debussy Nancarrow Riley Feldman and Morris Dora A Hanninen is professor of music theory at the University of Maryland She received the 2010 Outstanding Publication Award from the Society for Music Theory
