Communicating Quantities A Psychological Perspective:

Communicating Quantities Linda M. Moxey, Anthony J. Sanford, 2023-05-26 Every day in many situations we use expressions which seem to provide us with only vague information The weather forecaster tells us that some showers are likely in Northern regions during the night a statement which is vague with respect to number of showers location and time Yet such messages are informative and often it is not possible for the producer of the message to be more precise A tutor tells his students that only a few students fail their exams outright This does not give a precise incidence Yet it might be equally misleading to do so For example to say that twelve percent failed outright last year says nothing about other years while to say an average of eight percent over the last five years says nothing about variability We argue that a precise numerical statement can be sometimes more misleading in reality than a vague statement Many researchers in psychology have attempted to capture the meaning of quantities by relating them to scales of quantity Originally published in 1993 the book explores this idea in detail and shows with original studies how these expressions also serve to control attention and to convey information about the expectations held by those involved in the communication The book works towards a psychological theory of the meaning of quantifiers and similarly vague terms New links are drawn between formal theories of quantification and psychological experimentation

Quantifiers and Cognition: Logical and Computational Perspectives Jakub Szymanik, 2016-02-19 This volume on the semantic complexity of natural language explores the question why some sentences are more difficult than others While doing so it lays the groundwork for extending semantic theory with computational and cognitive aspects by combining linguistics and logic with computations and cognition Quantifier expressions occur whenever we describe the world and communicate about it Generalized quantifier theory is therefore one of the basic tools of linguistics today studying the possible meanings and the inferential power of quantifier expressions by logical means The classic version was developed in the 1980s at the interface of linguistics mathematics and philosophy Before this volume advances in classic generalized quantifier theory mainly focused on logical questions and their applications to linguistics this volume adds a computational component the third pillar of language use and logical activity This book is essential reading for researchers in linguistics philosophy cognitive science logic AI and computer science

The Oxford Handbook of Experimental Semantics and Pragmatics Chris Cummins, Napoleon Katsos, 2019-03-19 This handbook is the first to explore the growing field of experimental semantics and pragmatics In the past 20 years experimental data has become a major source of evidence for building theories of language meaning and use encompassing a wide range of topics and methods Following an introduction from the editors the chapters in this volume offer an up to date account of research in the field spanning 31 different topics including scalar implicatures presuppositions counterfactuals quantification metaphor prosody and politeness as well as exploring how and why a particular experimental method is suitable for addressing a given theoretical debate The volume s forward looking approach also seeks to actively identify

questions and methods that could be fruitfully combined in future experimental research

Written in a clear and accessible style this handbook will appeal to students and scholars from advanced undergraduate level upwards in a range of fields including semantics and pragmatics philosophy of language psycholinguistics computational linguistics cognitive science and neuroscience

The Wiley Blackwell Handbook of Judgment and Decision Making Gideon Keren, George Wu, 2015-12-14 A comprehensive up to date examination of the most important theory concepts methodological approaches and applications in the burgeoning field of judgment and decision making JDM Emphasizes the growth of JDM applications with chapters devoted to medical decision making decision making and the law consumer behavior and more Addresses controversial topics from multiple perspectives such as choice from description versus choice from experience and contrasts between empirical methodologies employed in behavioral economics and psychology Brings together a multi disciplinary group of contributors from across the social sciences including psychology economics marketing finance public policy sociology and philosophy 2 Volumes

Perspectives on Framing Gideon Keren, 2011-02-11 Language comprises a major mark of humans compared with other primates and is the main vehicle for social interaction A major characteristic of any natural language is that the same communication idea or intention can be articulated in different ways in other words the same message can be framed differently The same medical treatment can be portrayed in terms chance of success or chance of failure energy reduction can be expressed in terms of savings per day or savings per year and a task can be described as 80% completed or 20% uncompleted In this book contributors from a variety of disciplines psychology linguistics marketing political science and medical decision making come together to better understand the mechanisms underlying framing effects and assess their impact on the communication process

How We Reason Philip Nicholas Johnson-Laird, 2006 Good reasoning can lead to success bad reasoning can lead to catastrophe Yet it is not obvious how we reason and why we make mistakes This book looks at the mental processes that underlie our reasoning It provides the most accessible account yet of the science of reasoning

Thinking David Hardman, Laura Macchi, 2004-01-09 The first international handbook to bring the areas of reasoning judgment and decision making together now in paperback format The book brings three of the important topics of thinking together reasoning judgment and decision making and discusses key issues in each area The studies described range from those that are purely laboratory based to those that involve experts making real world judgments in areas such as medical and legal decision making and political and economic forecasting International collection of original chapters by leading researchers in the field Several chapters contain important new theoretical perspectives Paperback version is more affordable for individual researchers

Comparative Risk Assessment Holger Schütz, 2006-08-25 Providing a catalogue of suggested solutions for different categories of issues this book offers a balanced overview and methodological examples for the practical implementation of the CRA It considers CRA in the USA Europe and Germany using case studies to analyze and exemplify the decision making processes and challenges involved The authors then go on to look at the practical lessons learned from these case studies together with an in depth discussion of the underlying scientific hypotheses Sound scientific knowledge for everyone who makes decisions whether government ministers regulators or company directors

Encyclopedia of Language & Linguistics E. K. Brown, 2006 **Trends in Dietary Fats Research** M. V.

Landow, 2006 Fats have important functions in the body Fats and oils are also called lipids Fats are the most concentrated source of food energy Per gram fats have over twice as many calories as protein or carbohydrates Fats supply nine calories per gram whereas carbohydrates sugars and starches and protein supply four calories per gram Our bodies store excess dietary fats in fat cells to meet later energy needs Excess dietary carbohydrates and protein also are converted into fat by our bodies and stored for later use In addition to supplying energy fats have several important functions Fats give foods their characteristic flavours Fats help provide a feeling of satiety or fullness Dietary fats carry the fat soluble vitamins A D E and K Fats are also a source of the essential fatty acids linoleic acid and linolenic acid Because the body cannot make these essential fatty acids they must be provided in the diet There are three types of natural fats found in foods These are monounsaturated polyunsaturated and saturated fats Most foods contain all three fats in different amounts Another type of fat is trans fats These fats are formed when vegetable oils are processed into margarine or shortening through a process called hydrogenation This new book brings together new research in this sometimes confusing but critical area of research
