   Commutative Group Algebras Gregory Karpilovsky,   **Rings, Modules, Algebras, and Abelian Groups** Alberto Facchini,Evan Houston,Luigi Salce,2020-02-10 Rings Modules Algebras and Abelian Groups summarizes the proceedings of a recent algebraic conference held at Venice International University in Italy Surveying the most influential developments in the field this reference reviews the latest research on Abelian groups algebras and their representations module and ring theory and topological   Commutative Group Algebras Gregory Karpilovsky,1983   **Commutative Group Schemes** F. Oort,2006-11-14 We restrict ourselves to two aspects of the field of group schemes in which the results are fairly complete commutative algebraic group schemes over an algebraically closed field of characteristic different from zero and a duality theory concern ing abelian schemes over a locally noetherian prescheme The prelim inaries for these considerations are brought together in chapter I SERRE described properties of the category of commutative quasi algebraic groups by introducing pro algebraic groups In char8teristic zero the situation is clear In characteristic different from zero information on finite group schemee is needed in order to handle group schemes this information can be found in work of GABRIEL In the second chapter these ideas of SERRE and GABRIEL are put together Also extension groups of elementary group schemes are determined A suggestion in a paper by MANIN gave crystallization to a fee11ng of symmetry concerning subgroups of abelian varieties In the third chapter we prove that the dual of an abelian scheme and the linear dual of a finite subgroup scheme are related in a very natural way Afterwards we became aware that a special case of this theorem was already known by CARTIER and BARSOTTI Applications of this duality theorem are the classical duality theorem duality hy pothesis proved by CARTIER and by NISHI calculation of Ext a A where A is an abelian variety result conjectured by SERRE a proof of the symmetry condition due to MANIN concerning the isogeny type of a formal group attached to an abelian variety   *Unit Groups of Modular Commutative Group Algebras* Lakshminarayanan Natarajan,1993   *The Isomorphism Problem for Commutative Group Algebras* William Davis Ullery,1983   **Brauer Groups, Hopf Algebras and Galois Theory** Stefaan Caenepeel,2002-03-31 This volume is devoted to the Brauer group of a commutative ring and related invariants Part I presents a new self contained exposition of the Brauer group of a commutative ring Included is a systematic development of the theory of Grothendieck topologies and tale cohomology and discussion of topics such as Gabber s theorem and the theory of Taylor s big Brauer group of algebras without a unit Part II presents a systematic development of the Galois theory of Hopf algebras with special emphasis on the group of Galois objects of a cocommutative Hopf algebra The development of the theory is carried out in such a way that the connection to the theory of the Brauer group in Part I is made clear Recent developments are considered and examples are included The Brauer Long group of a Hopf algebra over a commutative ring is discussed in Part III This provides a link between the first two parts of the volume and is the first time this topic has been discussed in a monograph Audience Researchers whose work involves group theory The first two parts in particular can be

recommended for supplementary graduate course use **Zero Commutative Group Algebras and Algebras of Small Order Over the Field Z2 and Other Fields** John Wiseman Simmons,1982 A Characterization of Commutative Group Algebras and Measure Algebras Marc Aristide Rieffel,1963 The Block Theory of Finite Group Algebras: Markus Linckelmann,2018-05-24 This is a comprehensive introduction to the modular representation theory of finite groups with an emphasis on block theory The two volumes take into account classical results and concepts as well as some of the modern developments in the area Volume 1 introduces the broader context starting with general properties of finite group algebras over commutative rings moving on to some basics in character theory and the structure theory of algebras over complete discrete valuation rings In Volume 2 blocks of finite group algebras over complete p local rings take centre stage and many key results which have not appeared in a book before are treated in detail In order to illustrate the wide range of techniques in block theory the book concludes with chapters classifying the source algebras of blocks with cyclic and Klein four defect groups and relating these classifications to the open conjectures that drive block theory **Abelian Groups** Laszlo Fuchs,Rudiger Gobel,1993-04-28 This volume contains information offered at the international conference held in Curacao Netherlands Antilles It presents the latest developments in the most active areas of abelian groups particularly in torsion free abelian groups For both researchers and graduate students it reflects the current status of abelian group theory Abelian Groups discusses finite rank Butler groups almost completely decomposable groups Butler groups of infinite rank equivalence theorems for torsion free groups cotorsion groups endomorphism algebras and interactions of set theory and abelian groups This volume contains contributions from international experts It is aimed at algebraists and logicians research mathematicians and advanced graduate students in these disciplines **Noncommutative Rings, Group Rings, Diagram Algebras and Their Applications** Surender Kumar Jain,S. Parvathi,Dinesh Khurana,2008 Articles in this volume are based on talks given at the International Conference on Noncommutative Rings Group Rings Diagram Algebras and Their Applications The conference provided researchers in mathematics with the opportunity to discuss new developments in these rapidly growing fields This book contains several excellent articles both expository and original with new and significant results It is suitable for graduate students and researchers interested in Ring Theory Diagram Algebras and related topics

The Block Theory of Finite Group Algebras: Markus Linckelmann,2018-05-24 This is a comprehensive introduction to the modular representation theory of finite groups with an emphasis on block theory The two volumes take into account classical results and concepts as well as some of the modern developments in the area Volume 1 introduces the broader context starting with general properties of finite group algebras over commutative rings moving on to some basics in character theory and the structure theory of algebras over complete discrete valuation rings In Volume 2 blocks of finite group algebras over complete p local rings take centre stage and many key results which have not appeared in a book before are treated in detail In order to illustrate the wide range of techniques in block theory the book concludes with chapters

classifying the source algebras of blocks with cyclic and Klein four defect groups and relating these classifications to the open conjectures that drive block theory **Algebras and Smarandache Types** Hee Sik Kim,J. Neggers,Sun Shin Ahn, If an algebra of type A contains a subalgebra which is also an algebra of type B then it is a Smarandache B type A algebra provided the subalgebra of type B contains at least two elements This generalizes the notion of Smarandache group where the group of order 2 is a subsemigroup of a semigroup In this paper we investigate a number of such pairings and we deduce a number of conclusions as a consequence **Abelian Group Theory and Related Topics** Rüdiger Göbel,Paul Hill,Wolfgang Liebert,1994 This volume contains the proceedings of a conference on abelian groups held in August 1993 at Oberwolfach The conference brought together forty seven participants from all over the world and from a range of mathematical areas Experts from model theory set theory noncommutative groups module theory and computer science discussed problems in their fields that relate to abelian group theory This book provides a window on the frontier of this active area of research **Algebraic Foundations of Non-Commutative Differential Geometry and Quantum Groups** Ludwig Pittner,1995-12-12 Quantum groups and quantum algebras as well as non commutative differential geometry are important in mathematics and considered to be useful tools for model building in statistical and quantum physics This book addressing scientists and postgraduates contains a detailed and rather complete presentation of the algebraic framework Introductory chapters deal with background material such as Lie and Hopf superalgebras Lie super bialgebras or formal power series Great care was taken to present a reliable collection of formulae and to unify the notation making this volume a useful work of reference for mathematicians and mathematical physicists **Abelian Groups and Modules** Paul C. Eklof,Rüdiger Göbel,2013-04-17 A 30 article volume introducing an active and attractive part of algebra that has gained much from its position at the crossroads of mathematics over the years The papers stimulate the reader to consider and actively investigate the topics and problems they contain *Partially Ordered Abelian Groups with Interpolation* K. R. Goodearl,2010-05-30 A branch of ordered algebraic structures has grown motivated by K theoretic applications and mainly concerned with partially ordered abelian groups satisfying the Riesz interpolation property This monograph is the first source in which the algebraic and analytic aspects of these interpolation groups have been integrated into a coherent framework for general reference The author provides a solid foundation in the structure theory of interpolation groups and dimension groups directed unperforated interpolation groups with applications to ordered K theory particularly in mind Although interpolation groups are defined as purely algebraic structures their development has been strongly influenced by functional analysis This cross cultural development has left interpolation groups somewhat estranged from both the algebraists who may feel intimidated by compact convex sets and the functional analysts who may feel handicapped by the lack of scalars This book requiring only standard first year graduate courses in algebra and functional analysis aims to make the subject accessible to readers from both disciplines High points of the development include the following characterization of dimension groups as direct limits of

finite products of copies of the integers the double dual representation of an interpolation group with order unit via affine continuous real valued functions on its state space the structure of dimension groups complete with respect to the order unit norm as well as monotone sigma complete dimension groups and dimension groups with countably infinite interpolation and an introduction to the problem of classifying extensions of one dimension group by another The book also includes a development of portions of the theory of compact convex sets and Choquet simplices and an expository discussion of various applications of interpolation group theory to rings and C DEGREES algebras via ordered K_0 A discussion of some open problems in interpolation groups and dimension groups concludes the book Of interest of course to researchers in ordered algebraic structures the book will also be a valuable source for researchers seeking a background in interpolation groups and dimension groups for applications to such subjects as rings operator algebras topological Markov chains positive polynomials compact group actions or other areas where ordered Grothendieck groups might be useful This is a reprint of the 1986 original SUR **Abelian Groups, Rings, Modules, and Homological Algebra** Pat Goeters,Overtoun M.G. Jenda,2006-01-27 About the book In honor of Edgar Enochs and his venerable contributions to a broad range of topics in Algebra top researchers from around the world gathered at Auburn University to report on their latest work and exchange ideas on some of today s foremost research topics This carefully edited volume presents the refereed papers of the participants of these talks along with contributions from other veteran researchers who were unable to attend These papers reflect many of the current topics in Abelian Groups Commutative Algebra Commutative Rings Group Theory Homological Algebra Lie Algebras and Module Theory Accessible even to beginning mathematicians many of these articles suggest problems and programs for future study This volume is an outstanding addition to the literature and a valuable handbook for beginning as well as seasoned researchers in Algebra about the editors H PAT GOETERS completed his undergraduate studies in mathematics and computer science at Southern Connecticut State University and received his Ph D in 1984 from the University of Connecticut under the supervision of William J Wickless After spending one year in a post doctoral position in Wesleyan University under the tutelage of James D Reid Goeters was invited for a tenure track position in Auburn University by Ulrich F Albrecht Soon afterwards William Ullery and Overtoun Jenda were hired and so began a lively Algebra group OVERTOUN M G JENDA received his bachelor s degree in Mathematics from Chancellor College the University of Malawi He moved to the U S 1977 to pursue graduate studies at University of Kentucky earning his Ph D in 1981 under the supervision of Professor Edgar Enochs He then returned to Chancellor College where he was a lecturer assistant professor for three years He moved to the University of Botswana for another three year stint as a lecturer before moving back to the University of Kentucky as a visiting assistant professor in 1987 In 1988 he joined the Algebra research group at Auburn University   Models, Modules and Abelian Groups Rüdiger Göbel,Brendan Goldsmith,2008-12-10 This is a memorial volume dedicated to A L S Corner previously Professor in Oxford who published important results on algebra especially on the

connections of modules with endomorphism algebras The volume contains refereed contributions which are related to the work of Corner It contains also an unpublished extended paper of Corner himself A memorial volume with important contributions related to algebra
