David C. Arney, Donald B. Small

Changing Core Mathematics:

Changing Core Mathematics David C. Arney, Donald B. Small, 2002 Mathematicians, engineers, and physical scientists discuss how the first two years of a core college mathematics program should change over the next five to ten years to meet the mathematical needs of partner disciplines and society's needs arising from globalization and the information age. They examine issues related to goals and content, anticipated advances in technology, and new instructional techniques, and make recommendations for future course designs that emphasize modeling, inquiry, and conceptual understanding. Arney is dean of the School of Mathematics and Sciences at the College of Saint Rose. Small is on the faculty of the Department of Mathematics at the United States Military Academy. Teaching to Change the World Jeannie Oakes, Martin Lipton, Lauren Anderson, Jamy Stillman, 2015-11-17 This is an up-to-the-moment, engaging, multicultural introduction to education and teaching and the challenges and opportunities they present. Together, the four authors bring a rich blend of theory and practical application to this groundbreaking text. Jeannie Oakes is a leading education researcher and former director of the UCLA teacher education program. Martin Lipton is an education writer and consultant and has taught in public schools for 31 years. Lauren Anderson and Jamy Stillman are former public school teachers now working as teacher educators. This unique, comprehensive, foundational text considers the values and politics that pervade the U.S. education system, explains the roots of conventional thinking about schooling and teaching, asks critical questions about how issues of power and privilege have shaped and continue to shape educational opportunity, and presents powerful examples of real teachers working for equity and justice. Taking the position that a hopeful democratic future depends on ensuring that all students learn, the text pays particular attention to inequalities associated with race, social class, language, gender, and other social categories, and explores teachers' role in addressing them. The text provides a research-based and practical treatment of essential topics and situates those topics in relation to democratic values, issues of diversity, and cognitive, sociocultural, and constructivist perspectives on learning. The text shows how knowledge of education foundations and history can help teachers understand the organization of today's schools, the content of contemporary curriculum, and the methods of modern teaching. It likewise shows how teachers can use such knowledge when thinking about and responding to headline issues like charter schools, vouchers, standards testing, and bilingual education, to name just a few. Central to this text is a belief that schools can and must be places of extraordinary educational quality and institutions in the service of social justice. Thus, the authors address head-on tensions between principles of democratic schooling and competition for always-scarce, high-quality opportunities. Woven through the text are the voices of a diverse group of teachers who share their analyses and personal anecdotes concerning what teaching to change the world means and involves. Undergraduate Mathematics for the Life Sciences Glenn Ledder,Jenna P. Carpenter,Timothy D. Comar,2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Mitchell Reyes,2021-04-15 As discrete fields of inquiry rhetoric and mathematics have long been considered antithetical to each other That is if mathematics explains or describes the phenomena it studies with certainty persuasion is not needed This volume calls into question the view that mathematics is free of rhetoric Through nine studies of the intersections between these two disciplines Arguing with Numbers shows that mathematics is in fact deeply rhetorical Using rhetoric as a lens to analyze mathematically based arguments in public policy political and economic theory and even literature the essays in this volume reveal how mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews influence the kinds of mathematical instruments we construct and accept In addition contributors examine how concepts of rhetoric such as analogy and visuality have been employed in mathematical and scientific reasoning including in the theorems of mathematical physicists and the geometrical diagramming of natural scientists Challenging academic orthodoxy these scholars reject a math equals truth reduction in favor of a more constructivist theory of mathematics as dynamic evolving and powerfully persuasive By bringing these disparate lines of inquiry into conversation with one another Arguing with Numbers provides inspiration to students established scholars and anyone inside or outside rhetorical studies who might be interested in exploring the intersections between the two disciplines In addition to the editors the contributors to this volume are Catherine Chaput Crystal Broch Colombini Nathan Crick Michael Dreher Jeanne Fahnstock Andrew C Jones Joseph Little and Edward Schiappa
