Communications Standard Dictionary:

Communications Standard Dictionary Martin H. Weik, 2012-12-06 Communications Standard Dictionary is a comprehensive compilation of terms and definitions used in communications and related fields. Communications is defined as the branch of science and technology concerned with the process of representing, transferring, and interpreting the meaning as signed to data by and among persons, places, or machines. Communication is defined as the transfer of information between a source transmitter (light source) and a sink receiver (photodetector) over one or more channels in accordance with a protocol and in a manner suitable for interpretation or comprehension by the receiver or as a method or means of conveying information of any kind from one person or place to another. In short, communications is a branch of science and technology, whereas communication pertains to the actual transfer of information. Thus, the word communication should be used as a modifier as in communication center, communication deception, and communication line, just as in the field of electronics, one speaks of electronic devices and electronic circuits.

Communications Standard Dictionary Martin Weik, 2012-12-06 Now in its Third Edition, the Communications Standard Dictionary maintains its position as the most comprehensive dictionary covering communications technologies available. A one-of-a-kind reference, this dictionary remains unmatched in the breadth and scope of its coverage and its primary reference for communications, computer data processing, and control systems professionals.
