Ecological Interface Design:

Ecological Interface Design Catherine M. Burns, John Hajdukiewicz, 2004-06-25 Ecological Interface Design delivers the techniques and examples that provide you with a foundation to succeed in designing advanced display graphics The opening chapters introduce the art of interface design by exposing the analytical methods behind designs the most common graphical forms and how these methods and forms are pulled together to create a complete design The book then incorporates case studies that further emphasize techniques and results Each example exemplifies a solution to a certain part of the EID puzzle Some of the examples demonstrate the analysis phase while others apply more scrutiny to graphical design Each is unique allowing you to use them in the development of your own designs The volume concludes with an analysis that connects ecological interface design with other common interface design methods enabling you to better understand how to combine approaches in the creation of design solutions *Applying Ecological Interface Design to*

Ecological Interface Design for Flexible Manufacturing Systems Dylan G. Cravens, 2021 Four interfaces were developed to factorially apply two principles of ecological interface design EID direct perception and direct manipulation to a flexible manufacturing system FMS The theoretical foundation and concepts employed during their development with findings related to more significant issues regarding interface design for complex socio technical systems are discussed Key aspects of cognitive systems engineering CSE and EID are also discussed An FMS synthetic task environment was developed and an experiment was conducted to evaluate real time decision support during supervisory operations Participants used all four interfaces to supervise and maintain daily part production at systematically varied levels of difficulty across sessions

Significant results provide evidence that the incorporation of direct perception and direct manipulation in interface design produced an additive effect allowing for greater support for the supervisory agents **Human-Computer Interaction** Julie

A. Jacko, Constantine Stephanidis, 2003-09-01 This four volume set provides the complete proceedings of the 10th International Conference on Human Computer Interaction held June 2003 in Crete Greece A total of 2 986 individuals from industry academia research institutes and governmental agencies from 59 countries submitted their work for presentation at the conference The papers address the latest research and development efforts as well as highlight the human aspects of design and use of computing systems Those accepted for presentation thoroughly cover the entire field of human computer interaction including the cognitive social ergonomic and health aspects of work with computers The papers also address major advances in knowledge and effective use of computers in a variety of diversified application areas including offices financial institutions manufacturing electronic publishing construction health care and disabled and elderly people *Using Ecological Interface Design to Enhance a Highway-in-the -sky Display* Roshanak Moradi Nadimian, University of Waterloo.

Department of Systems Design Engineering, 2003 **Applying Ecological Interface Design and Perceptual Control**

Theory to the Design of the Control Display Unit Sandra Chery,1999 A comparative evaluation of two alternative interface design approaches was performed The two frameworks Ecological Interface Design EID and Perceptual Control Theory PCT were both applied to the design of the Control Display Unit CDU interface of the CH 146 helicopter The CDU function of radio communication was studied A work domain analysis of the radio communication domain and a PCT based analysis modelling pilot CDU interactions were conducted Both analyses resulted in the identification of interface design requirements A qualitative comparison of the similarities and differences of these requirements was made EID and PCT based interfaces were designed based on these requirements The effectiveness of these interfaces was assessed by means of an analytical evaluation using task situations of radio communications performed under normal and abnormal circumstances The evaluation demonstrated that both interfaces supported radio exchanges under normal operations However the EID interface permitted support for diagnostic activities during abnormal operations whereas the PCT interface failed to do so

Applying Ecological Interface Design to the Driving Domain Heather Ann Stoner,2004 *Integrating Human Factors Methods and Systems Thinking for Transport Analysis and Design* Gemma J. M. Read,Vanessa Beanland,Michael G. Lenné,Neville A. Stanton,Paul M. Salmon,2017-07-26 Governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes Human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures This book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems The book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process The practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect The final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach

Examining of Collaboration with Ecological Interface Design Angela Garabet, University of Waterloo. Department of Systems Design Engineering, 2003

Supporting Knowledge-based Behavior Through Ecological Interface Design Kim J. Vicente, 1991 Many issues pertaining to the design of interfaces for complex human machine systems remain to be investigated A theoretical framework called Ecological Interface Design EID was developed to address some of these topics EID is based on Rasmussen s skills rules knowledge taxonomy and consists of three prescriptive design principles The objective of these principles is to exploit the powerful capabilities of perception and action while at the same time providing the necessary support for more effortful and error prone problem solving activities This research evaluated how well an interface based on the principles of EID allows operators to cope with problem solving activities associated with unfamiliar and unanticipated events According to EID to properly support such knowledge based behavior an interface should display the physical and functional properties of the work domain in the form of a multilevel representation based on Rasmussen s abstraction hierarchy A review of the literature in this area revealed that no experiment has ever compared a multilevel interface based on an abstraction hierarchy representation with another type of interface An experiment was undertaken to address this important research need The experiment was conducted within the context of DURESS DUal REservoir System Simulation a thermal hydraulic process control simulation The performance of two interfaces was compared a traditional interface based on a physical P representation and an EID interface based on a multilevel physical functional P F representation To evaluate how well these two interfaces support knowledge based problem solving activities a methodology based on psychological research on the relationship between expertise and memory recall was adopted Thus subjects were presented with a dynamic scenario of DURESS behavior and were asked to diagnose the event and to recall the state of the system There were three types of events normal fault and random Two groups of subjects were used theoretical experts in thermal hydraulics and novices Collectively the findings are consistent with the following conclusion An interface based on an abstraction hierarchy can provide more support for knowledge based behavior than an interface based on physical variables alone because it results in a better match to the theoretical expert s mental model
