**Data Mining Using SAS Applications** George Fernandez, 2010-12-12 Most books on data mining focus on principles and furnish few instructions on how to carry out a data mining project *Data Mining Using SAS Applications* not only introduces the key concepts but also enables readers to understand and successfully apply data mining methods using powerful yet user friendly SAS macro call files These methods stress the use of visualization to thoroughly study the structure of data and check the validity of statistical models fitted to data Learn how to convert PC databases to SAS data Discover sampling techniques to create training and validation samples Understand frequency data analysis for categorical data Explore supervised and unsupervised learning Master exploratory graphical techniques Acquire model validation techniques in regression and classification The text furnishes 13 easy to use SAS data mining macros designed to work with the standard SAS modules No additional modules or previous experience in SAS programming is required The author shows how to perform complete predictive modeling including data exploration model fitting assumption checks validation and scoring new data on SAS datasets in less than ten minutes

*Adaptive Regression for Modeling Nonlinear Relationships* George J. Knafl, Kai Ding, 2016-09-20 This book presents methods for investigating whether relationships are linear or nonlinear and for adaptively fitting appropriate models when they are nonlinear Data analysts will learn how to incorporate nonlinearity in one or more predictor variables into regression models for different types of outcome variables Such nonlinear dependence is often not considered in applied research yet nonlinear relationships are common and so need to be addressed A standard linear analysis can produce misleading conclusions while a nonlinear analysis can provide novel insights into data not otherwise possible A variety of examples of the benefits of modeling nonlinear relationships are presented throughout the book Methods are covered using what are called fractional polynomials based on real valued power transformations of primary predictor variables combined with model selection based on

likelihood cross validation The book covers how to formulate and conduct such adaptive fractional polynomial modeling in the standard logistic and Poisson regression contexts with continuous discrete and counts outcomes respectively either univariate or multivariate The book also provides a comparison of adaptive modeling to generalized additive modeling GAM and multiple adaptive regression splines MARS for univariate outcomes The authors have created customized SAS macros for use in conducting adaptive regression modeling These macros and code for conducting the analyses discussed in the book are available through the first author s website and online via the book s Springer website Detailed descriptions of how to use these macros and interpret their output appear throughout the book These methods can be implemented using other programs [Journal of the American Statistical Association](#) ,2007
