Statistics in Practice A new series of practical books outlining the use of statistical techniques in a wide range of application areas Human and Biological Sciences Earth and Environmental Sciences Industry Commerce and Finance The authors of this important text explore the processes through which archaeologists analyse their data and how these can be made more rigorous and effective by sound statistical modelling They assume relatively little previous statistical or mathematical knowledge Introducing the idea underlying the Bayesian approach to the statistical analysis of data and their subsequent interpretation the authors demonstrate the major advantage of this approach i e that it allows the incorporation of relevant prior knowledge or beliefs into the analysis By doing so it provides a logical and coherent way of updating beliefs from those held before observing the data to those held after taking the data into account To illustrate the power and effectiveness of mathematical and statistical modelling within the Bayesian framework a variety of real case studies are presented covering areas of common interest to archaeologists These case studies cover applications in areas such as radiocarbon dating spatial analysis provenance studies and other dating methods Background to these case studies is provided for those readers not so familiar with the subject Thus the book provides an examination of the theoretical and practical consequences of Bayesian analysis for examining problems in archaeology Students of archaeology and related disciplines and professional archaeologists will find the book an informative and practical introduction to the subject

*Anglo-Saxon Graves and Grave Goods of the 6th and 7th Centuries AD* Alex Bayliss, 2017-07-05 The Early Anglo Saxon Period is characterized archaeologically by the regular deposition of artefacts in human graves in England The scope for dating these objects and graves has long been studied but it has typically proved easier to identify and enumerate the chronological problems of the material than to solve them Prior to the work of the project reported on here therefore there was no comprehensive chronological framework for Early Anglo Saxon Archaeology and the level of detail and precision in dates that could be suggested was low The evidence has now been studied afresh using a coordinated suite of dating techniques both traditional and new a review and revision of artefact typology seriation of grave assemblages using correspondence analysis high precision radiocarbon dating of selected bone samples and Bayesian modelling using the results of all of these These were focussed primarily on the later part of the Early Anglo Saxon Period starting in the 6th century This research has produced a new chronological framework consisting of

sequences of phases that are separate for male and female burials but nevertheless mutually consistent and coordinated. These will allow archaeologists to assign grave assemblages and a wide range of individual artefact types to defined phases that are associated with calendrical date ranges whose limits are expressed to a specific degree of probability. Important unresolved issues include a precise adjustment for dietary effects on radiocarbon dates from human skeletal material. Nonetheless the results of this project suggest the cessation of regular burial with grave goods in Anglo Saxon England two decades or even more before the end of the seventh century. That creates a limited but important discrepancy with the current numismatic chronology of early English sceattas. The wider implications of the results for key topics in Anglo Saxon archaeology and social economic and religious history are discussed to conclude the report.

[Pre-Mamom Pottery Variation and the Preclassic Origins of the Lowland Maya](#) Debra S. Walker, 2023-04-15. Pre Mamom Pottery Variation and the Preclassic Origins of the Lowland Maya summarizes archaeological researchers current views on the adoption and first use of pottery across the Maya lowlands. Covering the early Middle Preclassic period when communities began using and producing pottery for the first time roughly 1000-600 BC through to the establishment of a recognizably Maya tradition termed the Mamom ceramic sphere about 600-300 BC the book demonstrates that the adoption was broadly contemporary with variation in how the new technology was adapted locally. Analyzing ceramics found at sites in Belize, Peten, Guatemala and Mexico the contributors provide evidence that the pre Mamom expansion of pottery resulted from increased dependence on maize agriculture, exploitation of limestone caprock and greater reliance on a preexisting system of long distance exchange. The chapters describe the individual experiences of new potting communities at various sites across the region. They are supplemented by appendixes presenting key chronological data as well as the principal types and varieties of pre Mamom ceramic complexes across the various spheres. Xe'eb, Swasey, Cunil and Ek' A significant amount of new material has been excavated in the last decade changing what is known about the early Middle Preclassic period and making Pre Mamom Pottery Variation and the Preclassic Origins of the Lowland Maya a first read of the early ceramic prehistory of the Maya lowlands. It will be a valuable resource for students and scholars interested in the archaeology of the Maya lowlands, Mesoamerican social complexity and ceramic technology.

**Crossing Jordan** Thomas Evan Levy, P.M. Michele Daviau, Randall W. Younker, 2016-06-16. Jordan is a key area of migration within the Levantine corridor that links the continents of Africa and Asia. Crossing Jordan examines the peoples and cultures that have travelled across Jordan from antiquity to the present. The book offers a critical analysis of recent

discoveries and archaeological models in Jordan and highlights the significant contribution of North American archaeologists to the field. Leading archaeologists explore the theory and methodology of archaeology in Jordan in essays which range across prehistory, the Bronze Age, the Iron Age, the Hellenistic and Roman periods, Nabatean civilization, the Byzantine period, and Islamic civilization. The volume provides an up-to-date guide to the archaeological heritage of Jordan, being an important resource for scholars and students of Jordan's history as well as citizens, non-governmental organizations, and tourists.

*Classification in the Information Age* Wolfgang A. Gaul, Hermann Locarek-Junge, 2012-12-06. The volume presents contributions to the analysis of data in the information age, a challenge of growing importance. Scientists and professionals interested in classification, data analysis, and statistics will find in this book the latest research results as well as applications to economics, especially finance and marketing, archaeology, bioinformatics, environment, and health.

The Times of Their Lives A. W. R. Whittle, 2018. *The Times of their Lives* explains how archaeologists can now move away from thinking about history in terms of thousands of years to periods from one or two centuries down to lifetimes and generations, a little more than two decades. This vastly improved precision comes from the application of Bayesian chronological frameworks for the interpretation of radiocarbon dates. If they do the right things, archaeologists in general and prehistorians in particular need not confine themselves any longer to the long term, which has often been seen as the defining currency of the discipline. Many prehistorians are still uncomfortable with the choice of narratives now available, or have not yet critically rethought old habits. This book will show how temporally much more precise accounts of the past can be achieved across a broad range of contexts and situations. It offers a series of case studies across much of the continent to provide much more precise timings of key features and trends in the European Neolithic sequence than are currently available, and to construct much more precise estimates of the duration of events and phenomena. From these, there is the possibility to open up new insights into the tempo of change through the detailed study of selected sites and situations across the span of the European Neolithic, from the sixth to the early third millennia cal BC. At stake is our ability to study the lives of Neolithic people everywhere at the scale of lifetimes, something unimaginable even a few years ago.

*Elenchus of Biblica*, 1996. Oxford Before the University Anne Dodd, 2003. The name of the city of Oxford is virtually synonymous with that of Oxford University. At the time of its emergence in the historical record, however, the university had taken root in what was already a thriving medieval town. The broad, shallow floodplain of the river Thames had encouraged the development of a major river crossing at Oxford, and this crossing provided both a focus for a permanent settlement and the name of Oxford, by which the settlement came to be known. This volume presents a comprehensive account of archaeological research into the origins and development of Oxford from the 7th century, when St Frideswide's Minster was established, through the subsequent development of Oxford as a Saxon burh or centre of defence against the Vikings, until the end of the 12th century, when the existence of a fledgling university is first apparent. It includes reports on some 18 previously unpublished archaeological sites. The chapters are

treated thematically and cover the Thames Crossing the defences and the developing town with its streets properties houses and churches Each report is preceded by a synthesis and discussion of the evidence which traces the development of theories about the Anglo Saxon town and reviews the many problems that still exist This discussion is supported by a gazetteer of relevant archaeological observations in the historic core of the city There is also a detailed review of the development of the river Thames and its floodplain at Oxford

**Wasperton** M. O. H. Carver,Catherine Hills,Jonathan Scheschkewitz,2009 The newest research on a major Anglo Saxon site paints a vivid picture of the beginnings of England Edited by Martin Carver For decades scholars have puzzled over the true story of settlement in Britain between the fifth and eight centuries Did the Romans leave Did the Anglo Saxons invade What happened to the British Newlight on these questions comes unexpectedly from Wasperton a small village on the Warwickshire Avon where archaeologists had the good fortune to excavate a complete cemetery and its prehistoric setting The community reused an old Romano British agricultural enclosure and built burial mounds beside it There was a score of cremations in Anglo Saxon pots but there were also unfurnished graves lined with stones and planks in the manner of western Britain In a pioneering analysis including radiocarbon and stable isotopes the authors of this book have put this variety of burial practice into a credible sequence and built up a picture of life at the time Here there were people who were culturally Roman British and Anglo Saxon pagan and Christian in continuous use of the same graveyard and drawing on a common inheritance Here we can see the beginnings of England and the people who made it happen not the kings warriors and preachers but the ordinary folk obliged to make their own choices choices about what nation to build and which religion to follow
