Tobin,Steve Ritchie,2001 Re Constructing Elementary Science seeks to improve the way science is taught in the elementary  
school There are three main contradictions that make it difficult for teachers and students to engage in meaningful activities  
from which understandings result The central issues in this book are framed in terms of three dichotomies that lead to  
tensions arising from the dialectic of opposing aspects of teaching and learning First there is a tension between learning as  
an individual process cultural production and as a cultural process cultural reproduction Second there is a tension between  
science and technology applied science Finally there exists a tension between children s interaction with nature and their  
language for describing and explaining nature Exemplary case studies are featured that show the tremendous capabilities of  
elementary students to talk about technology and in the process to learn to talk science These case studies are couched in an  
ongoing professional dialogue among the authors and the requirements to make such exemplary science happen in other  
classrooms **Resources in Education** ,1993 *Practical Agricultural Chemistry for Elementary Students* J. Bernard
