Course In Arithmetic:

A Course in Arithmetic J-P. Serre, 2012-12-06 This book is divided into two parts The first one is purely algebraic Its objective is the classification of quadratic forms over the field of rational numbers Hasse Minkowski theorem It is achieved in Chapter IV The first three chapters contain some preliminaries quadratic reciprocity law p adic fields Hilbert symbols Chapter V applies the preceding results to integral quadratic forms of discriminant I These forms occur in various questions modular functions differential topology finite groups The second part Chapters VI and VII uses analytic methods holomorphic functions Chapter VI gives the proof of the theorem on arithmetic progressions due to Dirichlet this theorem is used at a critical point in the first part Chapter III no 2 2 Chapter VII deals with modular forms and in particular with theta functions Some of the quadratic forms of Chapter V reappear here The two parts correspond to lectures given in 1962 and 1964 to second year students at the Ecole Normale Supérieure A redaction of these lectures in the form of duplicated notes was made by J J Sansuc Chapters I IV and J P Ramis and G Ruget Chapters VI VII They were very useful to me I extend here my gratitude to their authors

A Course in Arithmetic Jean-Pierre Serre, 1973 Serre's *A Course in Arithmetic* is a concentrated modern introduction to basically three areas of number theory quadratic forms Dirichlet's density theorem and modular forms The first edition was very well accepted and is now one of the leading introductory texts on the advanced undergraduate or beginning graduate level From the reviews The book is carefully written in particular very much self contained As was the intention of the author it is easily accessible to graduate or even undergraduate students yet even the advanced mathematician will enjoy reading it The last chapter more difficult for the beginner is an introduction to contemporary problems American Scientist
