Solving Coyote Problems John Trout, Jr.,2001 A new guide to dealing with one of our most annoying wily pests with both lethal nonlethal tips for dealing with America's real wily coyote Personal, Societal, and Ecological Values of Wilderness,1998 **Proceedings RMRS.**,1998 **Coyote** University of New Brunswick. Wildlife Research Unit,1992 **Coyote Predation of Livestock** Robert C. Acorn,1998 The coyote is the major predator of livestock in Alberta This booklet explains the ecology of coyote predation of livestock and how to recognize attacks on livestock by coyotes and other common predators It then describes the various techniques to prevent and control livestock predation by coyotes These include non lethal methods such as flock and herd management and the use of electric fences guardian dogs and frightening devices and lethal methods such as shooting poisoning and trapping **The Shepherd's Journal** William James Clarke,1915 **Eastern Coyote** G. functions howls are optimized to convey information while barks are suitable for attracting attention and for facilitating distance estimation Effective playbacks should incorporate both types of vocalization so that the complementary information they contain is available to listeners A year long experiment investigated the selectivity and efficacy of a variety of acoustic stimuli for calling coyotes Transients rarely responded vocally and territorial coyotes commonly responded to group coyote vocalizations During optimal conditions vocal response rates were over 55% for territorial males 42% for alpha females 11% for beta females and below 4% for transients Territorial coyotes were more likely to approach playbacks than transients and coyotes more readily approached group howls than other playback types When conditions were optimal approach response rates were 47% for alphas 49% for betas and 27% for transients These results suggest that playbacks can be used for selective coyote control
