## **Cortical Development From Specification To Differentiation:**

**Cortical Development** Christine F. Hohmann, 2012-12-06 The cerebral neo cortex unique to mammals is regarded as the prerequisite for higher cognitive function and is the structure most closely associated with the idea of the mind Expansion of mental capacity between mammals is most typically associated with an evolutionary increase in neocortical volume that culminates in the intricately folded configuration of sulci and gyri so characteristic of the primate cerebral cortex Yet the basic unit structure and fundamental connectivity of cortex appears to have been preserved from the smooth cortex of the mouse or rat to the highly convoluted cortical mantle of the human that if stretched out as a sheet would be large enough to wrap the entire human brain multiple times The basic similarity in structure and function has made it possible to conduct studies in the relatively simple cortices of rat or mouse and have the results pertain to the understanding of the primate including human cortex The neo cortex is an intriguing structure for the study of cell differentiation Its dozens of neuronal cell types and small handful of different glial types have their origin in a pseudostratified germinal epithelium lining the ventricular surface of the forebrain In its mature form neocortex is a six layered structure five of its layers contain multiple different but characteristic neuronal types with the sixth occupied by neuronal processes Various glial cells are dispersed throughout all six layers

Encyclopedia of Neuroscience Academic Press 2008 and serves as an affordable and immediate resource for scientists postdocs graduate students with an interest beyond the basic textbook materials on the subject The first and only comprehensive single volume reference for developmental neuroscience that goes beyond the basic textbook information The 93 chapters cover topics ranging from cell fate determination path finding synapse generation neural stem cells to neurodegeneration and regeneration carefully selected from the Encyclopedia of Neuroscience by one of the great developmental neuroscientists Greg Lemke The best researchers in the field provide their conclusions in the context of the latest experimental results
