Fagan, 2015-01-21 Make formative assessment work for you and your math students Finally formative assessment that adds up Bringing Math Students Into the Formative Assessment Equation is the ultimate resource for helping teachers implement formative assessment in the middle school mathematics classroom And it s much more than that With this research based teacher tested guide you won t just learn effective teaching strategies you ll turn your students into self regulated learners They ll monitor and assess their own progress and communicate to you about it Features include A clear and manageable six aspect instructional model Detailed strategies for helping students own their successes Real life examples from middle school mathematics teachers Useful resources and a companion website to help you implement formative assessment in your classroom Formative assessment isn t just for teachers anymore With the help

of this essential resource you'll work together with your students toward a common goal of math success. This book is outstanding. I would recommend it to any math educator. The depth of research integrated into practice is extensive and as a result it is the most practical book I have come across related to formative assessment and mathematics. The self-regulation aspects as well as the ownership and involvement emphasized in the book went beyond the traditional cognitive strategies endorsed in most books.

Marc Simmons, Principal, Ilwaco Middle School, Ocean Beach School District, Long Beach, WA. The ideas in this book are brought to life with examples of teachers and students in the classroom. The teacher voices, comments, and quotes lend credibility and are a big component of the book's strengths, as well as the visuals and graphics.

Rita Tellez, Math Coordinator, Ysleta Independent School District, El Paso, TX. *New York Math: Math A*, 2000. [Mechatronics by Bond Graphs](#) Vjekoslav Damic, John Montgomery, 2012-12-06. Bondgraphs are a well-established technique for the modelling of complex engineering systems. The subject of this book is an integrated modelling and simulation of mechatronics systems in a visual computer environment. The modelling is based on a system top-down and bottom-up approach. The mathematical models are generated in a form of differential algebraic equations and solved using numerical and symbolic algebra methods. The authors carefully explain a systematic procedure for developing the models using simple visual commands and construct a bondgraph at every level of decomposition. The integrated approach they develop is applied to mechanical, electrical, and control systems, multibody dynamics, and continuous systems. The book contains a powerful computer simulation package on the accompanying CD-ROM. The BondSim package supports top-down and bottom-up model development using component libraries.
