Mathematics today is approaching a state of crisis. As the demands of science and society for mathematical literacy increase, the percentage of American college students intending to major in mathematics plummets and achievement scores of entering college students continue their unremitting decline. As research in core mathematics reaches unprecedented heights of power and sophistication, the growth of diverse applied specialties threatens to fragment mathematics into distinct and frequently hostile mathematical sciences. These crises in mathematics present difficulties for science and engineering and alarms are beginning to sound in the scientific and even in the political communities. Citing a trend towards virtual scientific and technological illiteracy and a shrinking of our national commitment to excellence in science, mathematics, and technology, a recent study conducted for the President by the U.S. National Science Foundation and Department of Education warns of serious impending shortcomings in public understanding of science. Today, people in a wide range of non-scientific professions must have a greater understanding of technology than at any time in our history. Yet our educational system does not now provide such understanding. The study goes on to conclude that present trends pose a great risk of manpower shortages in the mathematical and engineering sciences. The pool from which our future scientific and engineering personnel can be drawn is in danger of becoming smaller even as the need for such personnel is increasing. It is time to take a serious look at mathematics tomorrow.

*The Story of Us Humans* explains human nature and human history including the origins of our species, emotions, behavior, morals, and society. It explains what we are, how we got here, and where we are today by describing the origin, history, and current ways of our neighborhoods, religion, government, science, technology, and business. Written in plain language, it explains what astronomy, physics, geology, biology, chemistry, anthropology, history, religion, social science, and political science tell us about ourselves. Most everyone feels that human success is measured in terms of healthy and happy children and communities. Human thoughts and actions involve little besides love and children, spouse and family, community, and justice because we are parenting mammals and social primates. Each of us simply wants to laugh and joke with our family and friends, pursue life, raise children, and strive to be a valued and contributing member of our community. We have made incredible progress building civilization in just a few hundred generations using nothing except our animal minds. Have you wondered: What are the laws of nature and how many laws are there? How did molecular life begin and then evolve into worms, fish, amphibians, reptiles, mammals, primates, and humans? What are the differences between these animals?

How did we get from the Big Bang to bacteria and on to Christianity democracy and globalization What is life like for gatherer hunters When did we first become farmers and first build cities and what was life like at those times What was life like in Ancient Mesopotamia Ancient Athens 13th century Cahokia Medieval China and Europe 19th Century New England Yoruban villages and in the U S during the 1920s What was the Industrial Revolution and how has it changed our lives What are the Hindu Muslim Confucian Jewish Christian Buddhist and Humanist religions and world views How have our wages infant mortality rates lifespans crime rates and poverty and inequality rates varied through the ages What are the biggest economic and social secrets in the U S today What are some meaningful goals and priorities for our civilization and how can we measure the success of our attempts to reach those goals Includes questions index bibliography and 1 200 internet links taking you to images videos and discussed documents
