Based on investigations of various subjects this text describes students working together to solve problems After each investigation students reflect on the mental constructions they have made through discussions Graphing calculator technology is integrated throughout

Investigations in Algebra Albert Cuoco,1990 Investigations in Algebra departs from a preoccupation with calculus as the ultimate goal of and the universal introduction to advanced mathematics by using Logo to explore combinatorics number theory the study of discrete functions and other topics that are not on the traditional path to calculus This approach encourages students to participate actively in exciting mathematics developing in them a facility for abstraction and an appreciation for the power of mathematical methods Most of the projects in the first two parts of the book have been worked through by students at Woburn High School often without assistance from a teacher In three parts Investigations in Algebra emphasizes the treatment of functions as concrete objects modeled as Logo procedures applies the techniques of induction and recursion to combinatorial problems and takes up topics in number theory including unique factorization congruence and multiplicative functions Integral to the presentation are numerous carefully constructed problems routine exercises long term projects and open ended experiments developed in twenty years of classroom use Albert Cuoco teaches mathematics at Woburn High School in Woburn Massachusetts Investigations in Algebra is included in the series Exploring with Logo edited by E Paul Goldenberg

Leonard Eugene Dickson, 1903 **Linear Delay-Differential Systems with Commensurate Delays: An Algebraic Approach** Heide Gluesing-Luerssen, 2004-10-19 The book deals with linear time invariant delay differential equations with commensurated point delays in a control theoretic context The aim is to show that with a suitable algebraic setting a behavioral theory for dynamical systems described by such equations can be developed The central object is an operator algebra which turns out to be an elementary divisor domain and thus provides the main tool for investigating the corresponding matrix equations The book also reports the results obtained so far for delay differential systems with noncommensurate delays Moreover whenever possible it points out similarities and differences to the behavioral theory of multidimensional systems which is based on a great deal of algebraic structure itself The presentation is introductory and self contained It should also be accessible to readers with no background in delay differential equations or behavioral systems theory The text should interest researchers and graduate students **The Beginnings and Evolution of Algebra**
Isabella Bashmakova, 2000-01-15 The elements of algebra were known to the ancient mesopotamians at least 4000 years ago Today algebra stands as one of the cornerstones of modern mathematics How then did the subject evolve An illuminating read for historians of mathematics and working algebraists looking into the history of their subject **Oscillation Matrices and Kernels and Small Vibrations of Mechanical Systems** Feliks Ruvimovich Gantmakher, Mark Grigor'evich Kreĭn, 1961 The exposition is self contained The first chapter presents all necessary results with proofs on the theory of matrices which are not included in a standard linear algebra course The only prerequisite in addition to standard linear algebra is the theory of linear integral equations used in Chapter 5 The book is suitable for graduate students research mathematicians and engineers interested in ordinary differential equations integral equations and their applications *France*, 1918
