Discrete Models:

Discrete Mathematics & Discrete Models Kimmo Eriksson, Hillevi Gavel, 2015-04-02 Discrete Probability Models and Methods Pierre Brémaud, 2017-01-31 The emphasis in this book is placed on general models Markov chains random fields random graphs universal methods the probabilistic method the coupling method the Stein Chen method martingale methods the method of types and versatile tools Chernoff's bound Hoeffding's inequality Holley's inequality whose domain of application extends far beyond the present text Although the examples treated in the book relate to the possible applications in the communication and computing sciences in operations research and in physics this book is in the first instance concerned with theory The level of the book is that of a beginning graduate course It is self contained the prerequisites consisting merely of basic calculus series and basic linear algebra matrices The reader is not assumed to be trained in probability since the first chapters give in considerable detail the background necessary to understand the rest of the book

An Introduction to Structured Population Dynamics J. M. Cushing, 1998-01-01 Interest in the temporal fluctuations of biological populations can be traced to the dawn of civilization How can mathematics be used to gain an understanding of population dynamics This monograph introduces the theory of structured population dynamics and its applications focusing on the asymptotic dynamics of deterministic models This theory bridges the gap between the characteristics of individual organisms in a population and the dynamics of the total population as a whole In this monograph many applications that illustrate both the theory and a wide variety of biological issues are given along with an interdisciplinary case study that illustrates the connection of models with the data and the experimental documentation of model predictions The author also discusses the use of discrete and continuous models and presents a general modeling theory for structured population dynamics Cushing begins with an obvious point individuals in biological populations differ with regard to their physical and behavioral characteristics and therefore in the way they interact with their environment Studying this point effectively requires the use of structured models Specific examples cited throughout support the valuable use of structured models Included among these are important applications chosen to illustrate both the mathematical theories and biological problems that have received attention in recent literature

Trustworthy Software Development Processes Qing Wang, Vahid Garousi, Raymond Madachy, Dietmar Pfahl, 2009-04-23 This book constitutes the refereed proceedings of the Third International Conference on Software Process held in Vancouver Canada in May 2009 colocated with ICSE 2009 the 31st International Conference on Software Engineering The 33 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 96 submissions The papers are organized in topical sections on process management process tools process analysis process simulation modeling experience report process metrics and process modeling and representation Discrete Models Donald Greenspan, 1973 Applied Partial Differential Equations Paul DuChateau, David W. Zachmann, 2002-01-01 Superb introduction devotes almost half its pages to numerical methods for solving partial

differential equations while the heart of the book focuses on boundary value and initial boundary value problems on spatially bounded and on unbounded domains integral transforms uniqueness and continuous dependence on data first order equations and more Numerous exercises included with solutions for many at end of book For students with little background in linear algebra a useful appendix covers that subject briefly

Facets of Systems Science George J. Klir, 2013-11-21 This book has a rather strange history It began in Spring 1989 thirteen years after our Systems Science Department at SUNY Binghamton was established when I was asked by a group of students in our doctoral program to have a meeting with them The spokesman of the group Cliff Joslyn opened our meeting by stating its purpose I can closely paraphrase what he said We called this meeting to discuss with you as Chairman of the Department a fundamental problem with our systems science curriculum In general we consider it a good curriculum we learn a lot of concepts principles and methodological tools mathematical computational heuristic which are fundamental to understanding and dealing with systems And yet we learn virtually nothing about systems science itself What is systems science What are its historical roots What are its aims Where does it stand and where is it likely to go These are pressing questions to us After all aren't we supposed to carry the systems science flag after we graduate from this program We feel that a broad introductory course to systems science is urgently needed in the curriculum Do you agree with this assessment The answer was obvious and yet not easy to give I agree of course but I do not see how the situation could be alleviated in the foreseeable future

Ladoga and Onego - Great European Lakes Leonid Rukhovets, Nikolai Filatov, 2010-03-11 Lakes Ladoga and Onego are the greatest lakes in Europe With a surface area of 17891 km² and a volume of 902 km³ the former is one of the top fifteen world's freshwater lakes and is only slightly smaller than Lake Ontario Lake Onego's surface area is 9600 km² and it has a volume of 292 km³ The watershed of Lake Ladoga 258000 km² extends through Northwestern European Russia and the eastern part of Finland including the large Lakes Ilmen and Saimaa and together these Great European Lakes are an important link in the Caspian Baltic White Sea waterway system Their ecological state affects the water quality of the Neva River the Gulf of Finland and the Baltic Sea Thus any changes affect the operational use environmental protection and management of water resources of a wide area and concern such issues as drinking recreation transport and energy The anthropogenic impact on the Lake Onego ecosystem is mostly determined by the sewage waters of the Petrozavodsk and Kondopoga industrial centres while the river inflow makes the most impact on Lake Ladoga Although the anthropogenic stress on the water ecosystems of the Great European Lakes has decreased over the last 15 years there has been some simultaneous evidence of global warming There is not enough current data to identify the climate induced changes in lake ecosystems but there is proof that the main cause of lacustrine ecosystem changes is determined by anthropogenic factors

Discrete Models Of Fluid Dynamics A S Alves,1991-04-30 Recent developments of discrete methods of fluid dynamics particularly the two most relevant aspects the half discrete case discrete Boltzmann equation and the totally discrete one lattice gas were discussed Both the conceptual and numerical significance of these discrete models were covered as well as the mathematical problems which arise from them This Colloquium is the third of a series initiated in Santa Fe USA 1986 the second having taken place in Torino Italy 1988

Models and Analogues for the Evaluation of Human Biodynamic Response, Performance and Protection Henning E. von Gierke,1979 Hidden Markov and Other Models for Discrete-valued Time Series Iain L. MacDonald,Walter Zucchini,1997-01-01 Discrete valued time series are common in practice but methods for their analysis are not well known In recent years methods have been developed which are specifically designed for the analysis of discrete valued time series Hidden Markov and Other Models for Discrete Valued Time Series introduces a new versatile and computationally tractable class of models the hidden Markov models It presents a detailed account of these models then applies them to data from a wide range of diverse subject areas including medicine climatology and geophysics This book will be invaluable to researchers and postgraduate and senior undergraduate students in statistics Researchers and applied statisticians who analyze time series data in medicine animal behavior hydrology and sociology will also find this information useful

Qualitative Analysis and Econometric Estimation of Continuous Time Dynamic Models Giancarlo Gandolfo,Giancarlo Martinengo,Pier Carlo Padoan,1981 Multidimensional Analysis and Discrete Models Aleksei A. Dezin,2018-01-18 Multidimensional Analysis and Discrete Models a thorough and detailed reference covers the main structures of multidimensional analysis and the intrinsically defined discrete models in applied mathematics mathematical physics and related fields The material is presented in a clear and straightforward manner with background information provided to define finite models and to clarify the concepts of multidimensional analysis The book covers special difference models of the mathematical physics equations models of boundary value problems and objects of quantum mechanics Considerable attention is also given to differential operators on Riemannian manifolds and the interpretation of classical vector analysis The primary focus of Multidimensional Analysis and Discrete Models is on the description of regular methods of constructing intrinsically defined discrete models for special classes of continual objects but emphasis is also given to the

interaction of ideas and methods that exist throughout the field of mathematics For example the connections between theories derived from classical and functional analysis Riemannian geometry and algebraic topology are illustrated and are discussed in terms of their relevance to computing solutions
