BASIC Technical Systems Simulation Dragoljub Savić, A. Dusko Savic, 1989 On writing BASIC simulation programs that solve realistic problems Covers the basics systems models and simulation random numbers technical systems transactions and queuing systems Annotation copyright Book News Inc Portland Or [Modelling and Simulation of Electrical Energy Systems Through a Complex Systems Approach Using Agent-Based Models](#) Enrique Alberto Kremers, 2014-07-31 Complexity science aims to better understand the processes of both natural and man made systems which are composed of many interacting entities at different scales A disaggregated approach is proposed for simulating electricity systems by using agent based models coupled to continuous ones The approach can help in acquiring a better understanding of the operation of the system itself e g on emergent phenomena or scale effects as well as in the improvement and design of future smart grids [Co-evolution of Intelligent Socio-technical Systems](#) Evangelia Mitleton-Kelly, 2013-05-27 As the interconnectivity between humans through technical devices is becoming ubiquitous the next step is already in the making ambient intelligence i e smart technical environments which will eventually play the same active role in communication as the human players leading to a co evolution in all domains where real time communication is essential This topical volume based on the findings of the Socionical European research project gives equal attention to two highly relevant domains of applications transport specifically traffic dynamics from the viewpoint of a socio technical interaction and evacuation scenarios for large scale emergency situations Care was taken to investigate as much as possible the limits of scalability and to combine the modeling using complex systems science approaches with relevant data analysis

Digital Computer Applications to Process Control M. Paul, 2016-11-04 Considers the application of modern control engineering on digital computers with a view to improving productivity and product quality easing supervision of industrial processes and reducing energy consumption and pollution The topics covered may be divided into two main subject areas 1 applications of digital control in the chemical and oil industries in water turbines energy and power systems robotics and manufacturing cement metallurgical processes traffic control heating and cooling 2 systems theoretical aspects of digital control adaptive systems control aspects multivariable systems optimization and reliability modelling and identification real time software and languages distributed systems and data networks Contains 84 papers [Technology and Safety of Marine Systems](#) J. Wang, 2003-07-22 Traditionally society has regulated hazardous industries by detailed references to engineering codes standards and hardware requirements These days a risk based approach is adopted Risk analysis involves identifying hazards categorizing the risks and providing the necessary decision support to determine the necessary arrangements and measures to reach a safe yet economical operating level When adopting such an approach the abundance of techniques available to express risk levels can often prove confusing and inadequate This highly practical guide to safety and risk analysis in Marine Systems not only adds to the current techniques available but more importantly identifies instances where

traditional techniques fall short. Uncertainties that manifest within risk analysis are highlighted and alternative solutions presented. In addition to risk analysis techniques, this book addresses influencing elements including reliability, Maintenance Decision making, and Human error. The highly practical approach of this title ensures it is accessible to the widest possible audience.

Stochastic Modeling and Optimization of Manufacturing Systems and Supply Chains J. George Shanthikumar, David D. Yao, W.H.M. Zijm, 2012-12-06. This volume originates from two workshops both focusing on themes that are reflected in the title of the volume. The first workshop took place at Eindhoven University of Technology April 24-26, 2001 on the occasion of the University granting a doctorate honoris causa to Professor John A. Buzacott. The second workshop was held on June 15, 2002 at Cornell University preceding the annual INFORMS/MSOM Conference honoring John's retirement and his lifetime contributions. Each of the two workshops consisted of about a dozen technical presentations. The objective of the volume, however, is not to simply publish the proceedings of the two workshops. Rather, our objective is to put together a select set of articles, each organized into a well-written chapter focusing on a timely topic. Collected into a single volume, these chapters aim to serve as a useful reference for researchers and practitioners alike and also as reading materials for graduate courses or seminars.

The Bell System Technical Journal, 1923 *Model Engineering for Simulation* Lin Zhang, Bernard P. Zeigler, Yuanjun Lai, 2019-02-27. Model Engineering for Simulation provides a systematic introduction to the implementation of generic, normalized, and quantifiable modeling and simulation using DEVS formalism. It describes key technologies relating to model lifecycle management, including model description, languages, complexity analysis, model management, service-oriented model composition, quantitative measurement of model credibility, and model validation and verification. The book clearly demonstrates how to construct computationally efficient, object-oriented simulations of DEVS models on parallel and distributed environments. Guides systems and control engineers in the practical creation and delivery of simulation models using DEVS formalism. Provides practical methods to improve credibility of models and manage the model lifecycle. Helps readers gain an overall understanding of model lifecycle management and analysis. Supported by an online ancillary package that includes an instructor's and student solutions manual.

Shipbuilding Technology and Education Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Marine Board, 1996-05-22. The U.S. shipbuilding industry now confronts grave challenges in providing essential support of national objectives. With recent emphasis on renewal of the U.S. naval fleet followed by the defense build-down, U.S. shipbuilders have fallen far behind in commercial ship construction and face powerful new competition from abroad. This book examines ways to reestablish the U.S. industry to provide a technology base and R & D infrastructure sustaining both commercial and military goals. Comparing U.S. and foreign shipbuilders in four technological areas, the authors find that U.S. builders lag most severely in business process technologies and in technologies of new products and materials. New advances in system technologies such as simulation are also needed, as are continuing developments in shipyard production.
