Stars and Stellar Systems Kaj A. Strand, 1963 Databases & On-line Data in Astronomy M.A Albrecht, D Egret, 2012-12-06 Data archiving has for many years been the most disregarded aspect of all data systems The increase in numbers of telescopes both groundbased and space borne and the increase in efficiency of detectors have generated overwhelming amounts of data Much of these data were and are not used on short timescales and should have been archived where they can be used later and or by others Archiving is essential Objects can change in the course of time New technological or scientific developments might require observing objects again The cost benefit ratio will become more and more important when considering the allocation of telescope time The retrieval of old data can then be crucial At present there are a number of data collections and data retrieval systems This book includes a series of clear and up to date descriptions of many important available data systems For professional astronomers librarians and computer engineers
