Algebraic Theory For Multivariable Linear Systems:

Algebraic Theory for Multivariable Linear Systems Blomberg, 1983-06-14 Algebraic Theory for Multivariable Linear Systems Methods of Algebraic Geometry in Control Theory: Part II Peter Falb, 1990 Control theory represents an attempt to codify in mathematical terms the principles and techniques used in the analysis and design of control systems Algebraic geometry may in an elementary way be viewed as the study of the structure and properties of the solutions of systems of algebraic equations The aim of this book is to provide access to the methods of algebraic geometry for engineers and applied scientists through the motivated context of control theory The development which culminated with this volume began over twenty five years ago with a series of lectures at the control group of the Lund Institute of Technology in Sweden I have sought throughout to strive for clarity often using constructive methods and giving several proofs of a particular result as well as many examples The first volume dealt with the simplest control systems i e single input single output linear time invariant systems and with the simplest algebraic geometry i e affine algebraic geometry While this is quite satisfactory and natural for scalar systems the study of multi input multi output linear time invariant control systems requires projective algebraic geometry Thus this second volume deals with multi variable linear systems and projective algebraic geometry The results are deeper and less transparent but are also quite essential to an understanding of linear control theory A review of From the Preface to Part 1 viii Preface the scalar theory is included along with a brief summary of affine algebraic geometry Appendix E *Nonlinear Control Systems Design 1989* A. Isidori, 2014-05-23 In the last two decades the development of specific methodologies for the control of systems described by nonlinear mathematical models has attracted an ever increasing interest New breakthroughs have occurred which have aided the design of nonlinear control systems However there are still limitations which must be understood some of which were addressed at the IFAC Symposium in Capri The emphasis was on the methodological developments although a number of the papers were concerned with the presentation of applications of nonlinear design philosophies to actual control problems in chemical electrical and mechanical engineering Methods of Algebraic Geometry in Control Theory: Part I Peter Falb, 2018-08-25 An introduction to the ideas of algebraic geometry in the motivated context of system theory Thus the author describes his textbook that has been specifically written to serve the needs of students of systems and control Without sacrificing mathematical care the author makes the basic ideas of algebraic geometry accessible to engineers and applied scientists The emphasis is on constructive methods and clarity rather than abstraction The student will find here a clear presentation with an applied flavor of the core ideas in the algebraic geometric treatment of scalar linear system theory The author introduces the four representations of a scalar linear system and establishes the major results of a similar theory for multivariable systems appearing in a succeeding volume Part II Multivariable Linear Systems and Projective Algebraic Geometry Prerequisites are the basics of linear algebra some simple notions from topology and the elementary properties of groups rings and fields and a basic course in linear systems Exercises

are an integral part of the treatment and are used where relevant in the main body of the text The present softcover reprint is designed to make this classic textbook available to a wider audience This book is a concise development of affine algebraic geometry together with very explicit links to the applications and should address a wide community of readers among pure and applied mathematicians Monatshefte für Mathematik *Polynomial Methods in Optimal Control and Filtering* Kenneth J. Hunt, 1993 This book aims to demonstrate the power and breadth of polynomial methods in control and filtering Direct polynomial methods have previously received little attention compared with the alternative Wiener Hopf transfer function method and the statespace methods which rely on Riccati equations The book provides a broad coverage of the polynomial equation approach in a range of linear control and filtering problems The principal feature of the approach is the description of systems in fractional form using transfer functions This representation leads quite naturally and directly to the parameterisation of all acceptable feedback controllers for a given problem in the form of a Diophantine equation over polynomials In the polynomial equation approach this direct parameterisation is explicitly carried through to the synthesis of controllers and filters and further to the computer implementation of numerical algorithms The book is likely to be of interest to students researchers and engineers with some control and systems theory or signal processing background It could be used as the basis of a graduate level course in optimal control and filtering The book proceeds from the necessary background material presented at a tutorial level through recent theoretical and practical developments to a detailed presentation of numerical algorithms

European Control Conference 1991, 1991-07-02 Proceedings of the European Control Conference 1991 July 2 5 1991 Grenoble France State Estimation of Polynomial Type Non-linear Differential Systems Jussi Orava, 1975 Implicit Linear Systems J. Dwight Aplevich, 1991-03-20 These notes are an introduction to implicit models of linear dynamical systems with applications to modelling control system design and identification intended for control system engineers at the beginning graduate level Because they are non oriented the models are particularly useful where causality is unknown or may change They are implicit in all variables and closed under the algebraic operations and hence are useful for computer aided analysis and design They possess the vector matrix conceptual simplicity and computational feasibility of state space equations together with the generality of matrix fraction descriptions and admit of canonical forms for which the joint identification of system parameters and dynamic variables is linear The notes simplify generalize and complement much recent work on singular or descriptor models but do not duplicate it Sections are included on realizations canonical forms minimal representations algebraic design applications quadratic optimization identification large scale systems and extensions to multi dimensional and time varying systems *European Control Conference 1993*, 1993-06-28 Proceedings of the European Control Conference 1993 Groningen Netherlands June 28 July 1 1993 **Control of Distributed Parameter Systems 1982** Jean-Pierre Babary, Laurent Le Letty, 2014-05-16 Control of Distributed Parameter Systems 1982 covers the proceeding of the Third International Federation of Automatic Control IFAC Symposium

on Control of Distributed Parameter Systems The book reviews papers that tackle issues concerning the control of distributed parameter systems such as modeling identification estimation stabilization optimization and energy system The topics that the book tackles include notes on optimal and estimation result of nonlinear systems approximation of the parameter identification problem in distributed parameters systems and optimal control of a punctually located heat source This text also encompasses the stabilization of nonlinear parabolic equations and the decoupling approach to the control of large spaceborne antenna systems Stability of Hilbert space contraction semigroups and the tracking problem in the fractional representation approach are also discussed This book will be of great interest to researchers and professionals whose work concerns automated control systems

Geometry at the Frontier: Symmetries and Moduli Spaces of Algebraic Varieties Paola Comparin, Eduardo Esteves, Herbert Lange, Sebastián Reyes-Carocca, Rubí E.

Rodríguez, 2021-04-23 Articles in this volume are based on lectures given at three conferences on Geometry at the Frontier held at the Universidad de la Frontera Puc n Chile in 2016 2017 and 2018 The papers cover recent developments on the theory of algebraic varieties in particular of their automorphism groups and moduli spaces They will be of interest to anyone working in the area as well as young mathematicians and students interested in complex and algebraic geometry
