Office Hours: TBA

Note: In general, I will respond to emails between 8:00 AM and 6:00 PM, Monday–Friday. If you write to me at other times, it may take me longer to respond.

Prerequisites: MATH 132, MATH 133, or comfort with the material from MATH 133 (even if you do not have Oberlin credit) is required. If you are comfortable with the material from this course already, then you should instead take MATH 220 or MATH 231.

Textbook: *Calculus, Volume 2* from OpenStax, 2016. The book is freely available at <https://openstax.org/details/books/calculus-volume-2>. Print copies may be purchased.

Course Description: Calculus is one of the greatest achievements of human thought, worthy of study in its own right, yet it also is the essential language of technical applications (e.g., biology, economics, physics, political science, psychology). It is the study of how quantities change. We model quantities by using functions (such as polynomial, rational, exponential, logarithmic, and trigonometric functions), and we apply techniques of calculus to study such functions.

This is the second of two semester-long courses in single-variable calculus. The first course (MATH 133) introduced our two main tools: the derivative and the definite integral. This second course uses those two tools in both mathematics and applications. The main topics include:

- (Chapter 1 — review) integration
- (Chapter 2) applications of integration
- (Chapter 3) techniques of integration; l'Hospital's rule and indeterminate forms; improper integrals
- (Chapter 4) introduction to ordinary differential equations
- (Chapter 5) sequences; infinite series
- (Chapter 6) power series
- (Chapter 7) parametric equations; polar coordinates.

Course Load: Oberlin College complies with federal regulations defining a credit hour. In this course, all students are expected to have 12 hours per week of academically engaged time throughout the semester. This amounts to 9 hours per week of additional academic work outside of lectures.
