Advances in Machine Vision Jorge L.C. Sanz, 2012-12-06 Machine Vision technology is becoming an indispensable part of the manufacturing industry Biomedical and scientific applications of machine vision and imaging are becoming more and more sophisticated and new applications continue to emerge This book gives an overview of ongoing research in machine vision and presents the key issues of scientific and practical interest A selected board of experts from the US Japan and Europe provides an insight into some of the latest work done on machine vision systems and applications

Exploratory Vision Michael S. Landy, Laurence T. Maloney, Misha Pavel, 2012-12-06 Advances in sensing signal processing and computer technology during the past half century have stimulated numerous attempts to design general purpose machines that see These attempts have met with at best modest success and more typically outright failure The difficulties encountered in building working computer vision systems based on state of the art techniques came as a surprise Perhaps the most frustrating aspect of the problem is that machine vision systems cannot deal with numerous visual tasks that humans perform rapidly and effortlessly In reaction to this perceived discrepancy in performance various researchers notably Marr 1982 suggested that the design of machine vision systems should be based on principles drawn from the study of biological systems This neuro-morphic or anthropomorphic approach has proven fruitful the use of pyramid multi-resolution image representation methods in image compression is one example of a successful application based on principles primarily derived from the study of biological vision systems It is still the case however that the performance of computer vision systems falls far short of that of the natural systems since they are intended to mimic suggesting that it is time to look even more closely at the remaining differences between artificial and biological vision systems

Explainable Artificial Intelligence for Smart Cities Mohamed Lahby, Utku Kose, Akash Kumar Bhoi, 2021-11-09 Thanks to rapid technological developments in terms of Computational Intelligence smart tools have been playing active roles in daily life It is clear that the 21st century has brought about many advantages in using high level computation and communication solutions to deal with real world problems however more technologies bring more changes to society In this sense the concept of smart cities has been a widely discussed topic in terms of society and Artificial Intelligence oriented research efforts The rise of smart cities is a transformation of both community and technology use habits and there are many different research orientations to shape a better future The objective of this book is to focus on Explainable Artificial Intelligence XAI in smart city development As recently designed advanced smart systems require intense use of complex computational solutions i.e. Deep Learning Big Data IoT architectures the mechanisms of these systems become black box to users As this means that there is no clear clue about what is going on within these systems anxieties regarding ensuring trustworthy tools also rise In recent years attempts have been made to solve this issue with the additional use of XAI methods to improve transparency levels This book provides a timely global reference source about cutting edge research efforts to ensure the XAI factor in smart city oriented

developments The book includes both positive and negative outcomes as well as future insights and the societal and technical aspects of XAI based smart city research efforts This book contains nineteen contributions beginning with a presentation of the background of XAI techniques and sustainable smart city applications It then continues with chapters discussing XAI for Smart Healthcare Smart Education Smart Transportation Smart Environment Smart Urbanization and Governance and Cyber Security for Smart Cities

Active Computer Vision by Cooperative Focus and Stereo Eric P. Krotkov, 2012-12-06 This book addresses an area of perception engineering which deals with constructive processes A model of the environment is analyzed using the information acquired from multiple viewpoints of multiple disparate sensors at multiple time instants Although the role of successive model building and active exploration of the environment as is discussed in this book is of great importance only a few researchers of machine perception have thus far addressed the problem in these directions Krotkov's book which is a modification and continuation of his highly successful dissertation focuses on active exploratory sensing in the context of spatial layout perception He uses stereo and focus to obtain distance By information and to eventually develop cooperative combining techniques means of a stereo system with verging cameras it is demonstrated that the distance measurements can be significantly improved by combining two sources In addition the problem of merging information from the multiple views is discussed in detail As the field of perception engineering seems to be of growing scientific and applied importance both practitioners and researchers in machine perception will find this book a valuable addition to their libraries Ramesh Jain Series Editor Acknowledgements I would like to thank Professor Ruzena Bajcsy for her constant encouragement and guidance during the five years of research leading to the dissertation upon which
