Complex Dynamics In Communication Networks:

Complex Dynamics in Communication Networks Ljupco Kocarev, 2005-06-13 Computer and communication networks are among society's most important infrastructures. The internet in particular is a giant global network of networks without central control or administration. It is a paradigm of a complex system where complexity may arise from different sources: topological structure, network evolution, connection and node diversity, or dynamical evolution. The present volume is the first book entirely devoted to the new and emerging field of nonlinear dynamics of TCP/IP networks. It addresses both scientists and engineers working in the general field of communication networks. [Complex Dynamics in Communication Networks](#)

Niloy Ganguly, Andreas Deutsch, Animesh Mukherjee, 2009-06-20 This self-contained book systematically explores the statistical dynamics on and of complex networks having relevance across a large number of scientific disciplines. The theories related to complex networks are increasingly being used by researchers for their usefulness in harnessing the most difficult problems of a particular discipline. The book is a collection of surveys and cutting-edge research contributions exploring the interdisciplinary relationship of dynamics on and of complex networks. Topics covered include complex networks found in nature: genetic pathways, ecological networks, linguistic systems, and social systems, as well as man-made systems such as the World Wide Web and peer-to-peer networks. The contributed chapters in this volume are intended to promote cross-fertilization in several research areas and will be valuable to newcomers in the field, experienced researchers, practitioners, and graduate students interested in systems exhibiting an underlying complex network structure in disciplines such as computer science, biology, statistical physics, nonlinear dynamics, linguistics, and the social sciences. *Broadband Communications, Networks and Systems*

Ioannis Tomkos, Georgios Ellinas, Prasun Sinha, 2012-05-01 This book constitutes the thoroughly refereed post-conference proceedings of the 7th International ICST Conference on Broadband Communications Networks and Systems (BROADNETS 2010) held in October 2010 in Athens, Greece. The 39 revised full papers were carefully selected from numerous submissions. The conference was divided into 3 tracks: Optical, Wireless, and Internet. The optical track covers topics such as optical switch architectures, reliable optical networking, routing, wavelength assignment, and traffic grooming. Network control and management. The wireless track highlights MIMO and OFDM techniques, mobility management, routing protocols, hybrid networks, and the internet track covers routing, scheduling, security, trust, semantic technologies, and social networks.

Evolutionary Dynamics of Complex Communications Networks Vasileios Karyotis,Eleni Stai,Symeon Papavassiliou,2013-10-14 Until recently most network design techniques employed a bottom up approach with lower protocol layer mechanisms affecting the development of higher ones This approach however has not yielded fascinating results in the case of wireless distributed networks Addressing the emerging aspects of modern network analysis and design Evolutionary Dynamics of Complex Communications Networks introduces and develops a top bottom approach where elements of the higher layer can be exploited in modifying the lowest physical topology closing the network design loop in an evolutionary fashion similar to that observed in natural processes This book provides a complete overview of contemporary design approaches from the viewpoint of network science and complex social network analysis A significant part of the text focuses on the classification and analysis of various network modification mechanisms for wireless decentralized networks that exploit social features from relevant online social networks Each chapter begins with learning objectives and introductory material and slowly builds to more detailed analysis and advanced concepts Each chapter also identifies open issues while by the end of the book potential research directions are summarized for the more interested researcher or graduate student The approach outlined in the book will help network designers and administrators increase the value of their infrastructure without requiring any significant additional investment Topics covered include basic network graph models and properties cognitive methods and evolutionary computing complex and social network analysis metrics and features and analysis and development of the distinctive structure and features of complex networks Considering all aspects of modern network analysis and design the text covers the necessary material and background to make it a suitable source of reference for graduate students postdoctoral researchers and scientists

Thai,Panos M. Pardalos,2014-03-03 Complex Social Networks is a newly emerging hot topic with applications in a variety of domains such as communication networks engineering networks social networks and biological networks In the last decade there has been an explosive growth of research on complex real world networks a theme that is becoming pervasive in many disciplines ranging from mathematics and computer science to the social and biological sciences Optimization of complex communication networks requires a deep understanding of the interplay between the dynamics of the physical network and the information dynamics within the network Although there are a few books addressing social networks or complex networks none of them has specially focused on the optimization perspective of studying these networks This book provides the basic theory of complex networks with several new mathematical approaches and optimization techniques to design and analyze dynamic complex networks A wide range of applications and optimization problems derived from research areas such
