Approaches to Language Typology Masayoshi Shibatani, Theodora Bynon, 1999 What do all languages have in common and what gives each language its individuality Language typology which has developed in response to these fundamental questions is concerned with the construction of theoretical frameworks capable of delimiting the range of possible human languages and of capturing constraints on cross linguistic variation Language typology is a major concern of all contemporary schools of linguistics yet a coherent image of the field is difficult to form because of the diversity of theoretical orientations and practical methodologies This collection brings together for the first time original contributions from major schools of typological research from the Prague School to the Generative Grammar tradition Leading scholars offer first hand accounts of the theoretical foundations and substantive findings of their particular school of thought clarifying basic assumptions which are often not explicitly stated in the literature The collection as a whole provides both a survey of the place of individual typological schools in the historiography of the subject and a comprehensive account of the present state of language typology in an international context It gives an overview of both the underlying unity of and the differences in the

**Theoretical Comparative Syntax** Naoki Fukui, 2006-04-18 Collected for the first time in a single volume these essays and articles by Naoki Fukui form an outline of some of the most significant and formative contributions to syntactic theory Focusing particularly on the typological differences between English type language and Japanese type languages Fukui examines the abstract parameters that both link and divide them Linguistic universals are considered in the light of cross linguistic variation and typological parametric differences are investigated from the viewpoint of universal principles The book's main focus is the nature and structure of invariant principles and parameters variables and how they interact to give principled accounts to a variety of seemingly unrelated differences between English and Japanese The contrasts between these two types of language is an ideal testing ground since the languages are superficially different in virtually every aspect of their linguistic structures from word order and wh movement to grammatical agreement and case marking systems among many others These articles constitute a considerable contribution to the development of the principles and parameters model in its exploration and refinement of theoretical concepts and fundamental principles of linguistic theory leading to some of the basic insights that lie behind the minimalist program      *The Syntactic and Semantic Structures of Complex Predicate*
