Wood,2005-11-22 An essential resource for all scientists researching cellular responses to DNA damage Introduces important new material reflective of the major changes and developments that have occurred in the field over the last decade Discussed the field within a strong historical framework and all aspects of biological responses to DNA damage are detailed Provides information on covering sources and consequences of DNA damage correcting altered bases in DNA DNA repair DNA damage tolerance and mutagenesis regulatory responses to DNA damage in eukaryotes and disease states associated with defective biological responses to DNA damage

DNA Repair and Replication Roger J. A. Grand,John J. Reynolds,2018-09-03 DNA Repair and Replication brings together contributions

from active researchers The first part of this book covers most aspects of the DNA damage response emphasizing the relationship to replication stress The second part concentrates on the relevance of this to human disease with particular focus on both the causes and treatments which make use of DNA Damage Repair DDR pathways Key Selling Features Chapters written by leading researchers Includes description of replication processes causes of damage and methods of repair

DNA Repair Mechanisms Jean-Michel H. Vos,1995 DNA Repair Fritz Eckstein,1998-10 DNA is the central repository of genetic information in the cell yet it is under constant attack by chemical mutagens radiation and other processes Cells therefore put a great deal of resources into repairing any damage to this precious store Mechanisms of DNA repair vary greatly in their level of complexity from specific reversal mechanisms that involve a single protein to sequential pathways that require many enzymes But at the heart of all these mechanisms lie proteins that recognize damage to DNA raising important questions about how damaged DNA may be distinguished These recognition processes are now finally yielding their secrets to structural analysis This volume focuses on DNA repair with an emphasis on structural data where available

DNA Repair Mechanisms and Their Biological Implications in Mammalian Cells M. Lambert,2013-03-09 This volume contains edited contributions from the speakers at the NATO Advanced Research Workshop on DNA Repair Mechanisms and Their Biological Implications in Mammalian Cells held October 1 6 1988 at the Abbaye Royale de Fontevraud Fontevraud France The meeting was dedicated to Paul Howard Flanders Yale University New Haven CT 1919 1988 whose seminal contributions to the DNA repair field include the discovery of the excision repair pathway the elucidation of post replication repair in E coli the isolation of the lexA and recC mutants and his extensive work on the enzymology of RecA A plethora of recent developments in DNA repair mechanisms and related processes in mammalian cells have advanced our understanding of this field in a number of different areas and have given new emphasis to the ways these systems both resemble DNA repair processes in other groups of organisms in some respects yet are strikingly different from them in others Within the past decade there have been a number of international conferences on DNA damage and repair mechanisms but none has been focused on these processes in mammalian cells
