Analytical Archaeology David L. Clarke,2014-10-24 This study was well established as a pioneer work on archaeological methodology the theoretical basis of all archaeological analysis whatever the period or era The first edition of the book presented and evaluated the radical changes in methodology which derived from developments in other disciplines such as cybernetics computer science and geography during the 1950s and 60s It argued that archaeology was a coherent discipline with its own methods and procedures and attempted to define the entities attributes artefacts types assemblages cultures and culture groups rigorously and consistently so that they could be applied to archaeological data The later edition continued the same general theory which is unparalleled in its scope and depth adding notes to help understanding of the advances in method and theory to support the student and professional archaeologist Review of the original publication One might venture that this is the most important archaeological work for twenty or thirty years and it will undoubtedly influence several future generations of archaeologists The Times Literary Supplement **Managing Archaeological Resources** Francis P McManamon,Andrew Stout,Jodi A Barnes,2016-06-03 Original research articles show the range of activities issues and solutions undertaken by contemporary managers of heritage sites around the world *A Computer Program for Monothetic Subdivisive Classification in Archaeology* Robert Whallon,1971 In this report Robert Whallon provides a brief description of monothetic subdivisive classification why it is useful in defining objective typologies in archaeology and how it can be applied to an archaeological data set using a computer program Because he wrote at a time when computer programs were run on paper cards Whallon includes operating instructions for the computer program including an illustration showing the deck arrangement for the cards He also includes a source listing of a Fortran IV program for the classification **The Mattassee Lake Sites** ,1982 **Computer Applications and Quantitative Methods in Archaeology** ,1997

Approaches to Archaeological Ceramics Carla M. Sinopoli,1991-06-30 More than any other category of evidence ceramics offers archaeologists their most abundant and potentially enlightening source of information on the past Being made primarily of day a relatively inexpensive material that is available in every region ceramics became essential in virtually every

society in the world during the past ten thousand years The straightforward technology of preparing forming and firing clay into hard durable shapes has meant that societies at various levels of complexity have come to rely on it for a wide variety of tasks Ceramic vessels quickly became essential for many household and productive tasks Food preparation cooking and storage the very basis of settled village life could not exist as we know them without the use of ceramic vessels Often these vessels broke into pieces but the virtually indestructible quality of the ceramic material itself meant that these pieces would be preserved for centuries waiting to be recovered by modern archaeologists The ability to create ceramic material with diverse physical properties to form vessels into so many different shapes and to decorate them in limitless manners led to their use in far more than utilitarian contexts Some vessels were especially made to be used in trade manufacturing activities or rituals while ceramic material was also used to make other items such as figurines models and architectural ornaments
