Applications of Digital Signal Processing to Audio and Acoustics Mark Kahrs,Karlheinz Brandenburg,2005-12-11
Karlheinz Brandenburg and Mark Kahrs With the advent of multimedia digital signal processing DSP of sound has emerged

from the shadow of bandwidth limited speech processing Today the main applications of audio DSP are high quality audio coding and the digital generation and manipulation of music signals They share common research topics including perceptual measurement techniques and analysis synthesis methods Smaller but nonetheless very important topics are hearing aids using signal processing technology and hardware architectures for digital signal processing of audio In all these areas the last decade has seen a significant amount of application oriented research The topics covered here coincide with the topics covered in the biannual workshop on Applications of Signal Processing to Audio and Acoustics This event is sponsored by the IEEE Signal Processing Society Technical Committee on Audio and Electroacoustics and takes place at Mohonk Mountain House in New Paltz New York A short overview of each chapter will illustrate the wide variety of technical material presented in the chapters of this book John Beerends Perceptual Measurement Techniques The advent of perceptual measurement techniques is a byproduct of the advent of digital coding for both speech and high quality audio signals Traditional measurement schemes are bad estimates for the subjective quality after digital coding decoding Listening tests are subject to statistical uncertainties and the basic question of repeatability in a different environment

Digital Audio Signal Processing F. Richard Moore,1985 Digital Audio Restoration Simon J. Godsill,Peter J.W. Rayner,2013-12-21 The application of digital signal processing DSP to problems in audio has been an area of growing importance since the pioneering DSP work of the 1960s and 70s In the 1980s DSP micro chips became sufficiently powerful to handle the complex processing operations required for sound restoration in real time or close to real time This led to the first commercially available restoration systems with companies such as CEDAR Audio Ltd in the UK and Sonic Solutions in the US selling dedicated systems world wide to recording studios broadcasting companies media archives and film studios Vast amounts of important audio material ranging from historic recordings of the last century to relatively recent recordings on analogue or even digital tape media were noise reduced and re released on CD for the increasingly quality conscious music enthusiast Indeed the first restorations were a revelation in that clicks crackles and hiss could for the first time be almost completely eliminated from recordings which might otherwise be unreleasable in CD format Until recently however digital audio processing has required high powered computational engines which were only available to large institutions who could afford to use the sophisticated digital remastering technology With the advent of compact disc and other digital audio formats followed by the increased accessibility of home computing digital audio processing is now available to anyone who owns a PC with sound card and will be of increasing importance in association with digital video as the multimedia revolution continues into the next millennium
