**Bayesian Forecasting and Dynamic Models** Mike West, Jeff Harrison, 2013-06-29 In this book we are concerned with Bayesian learning and forecasting in dynamic environments We describe the structure and theory of classes of dynamic models and their uses in Bayesian forecasting The principles models and methods of Bayesian forecasting have been developed extensively during the last twenty years This development has involved thorough investigation of mathematical and statistical aspects of forecasting models and related techniques With this has come experience with application in a variety of areas in commercial and industrial scientific and socio economic fields Indeed much of the technical development has been driven by the needs of forecasting practitioners As a result there now exists a relatively complete statistical and mathematical framework although much of this is either not properly documented or not easily accessible Our primary goals in writing this book have been to present our view of this approach to modelling and forecasting and to provide a reasonably complete text for advanced university students and research workers The text is primarily intended for advanced undergraduate and postgraduate students in statistics and mathematics In line with this objective we present thorough discussion of mathematical and statistical features of Bayesian analyses of dynamic models with illustrations examples and exercises in each Chapter
