Water Resource Economics, second edition Ronald C. Griffin, 2016-03-11 Updated edition of a comprehensive introduction to the economics of water management with self-contained treatment of all necessary economic concepts. Economics brings powerful insights to water management but most water professionals receive limited training in it. The second edition of this text offers a comprehensive development of water resource economics that is accessible to engineers and natural scientists as well as to economists. The goal is to build a practical platform for understanding and performing economic analysis using both theoretical and empirical tools. Familiarity with microeconomics or natural resource economics is helpful but all the economics needed is presented and developed progressively in the text. The book focuses on the scarcity of water quantity rather than on water quality. The author presents the economic theory of resource allocation recognizing the peculiarities imposed by water and then goes on to treat a range of subjects including conservation, groundwater depletion, water law, policy analysis, cost-benefit analysis, water marketing, privatization, and demand and supply estimation. Added features of this updated edition include a new chapter on water scarcity risk with climate change and necessary risk tools introduced progressively and new risk attentive material elsewhere in the text, sharper treatment of block rates and pricing doctrine, expanded attention to contemporary literature and issues, and new appendixes on input-output analysis, water footprinting, and virtual water and cost allocation. Each chapter ends with a summary and exercises.

Energy Resources and Systems Tushar K. Ghosh, Mark A. Prelas, 2009-06-04 In the lifetimes of the authors, the world and especially the United States have received three significant wake-up calls on energy production and consumption. The first of these occurred on October 15, 1973, when the Yom Kippur War began with an attack by Syria and Egypt on Israel. The United States and many western countries supported Israel. Because of the western support of Israel, several Arab oil-exporting nations imposed an oil embargo on the west. These nations withheld five million barrels of oil per day. Other countries made up about one million barrels of oil per day, but the net loss of four million barrels of oil production per day extended through March of 1974. This represented 7% of the free world's (excluding the USSR) oil production. In 1972, the price of crude oil was about \$3.00 per barrel, and by the end of 1974, the price of oil had risen by a factor of 4 to over \$12.00. This resulted in one of the worst recessions in the post-World War II era. As a result, there was a movement in the United States to become energy independent. At that time, the United States imported about one-third of its oil, about five million barrels per day. After the embargo was lifted, the world chose to ignore the wake-up call and went on with business as usual.
