Parsaei,A. Mital,2012-12-06 The 1980s have witnessed a

tremendous growth in the field of computer integrated manufacturing systems The other major areas of development have been computer aided design computer aided manufacturing industrial robotics automated assembly cellular and modular material handling computer networking and office automation to name just a few These new technologies are generally capital intensive and do not conform to traditional cost structures The net result is a tremendous change in the way costs should be estimated and economic analyses performed The majority of existing engineering economy texts still profess application of traditional analysis methods But as was mentioned above it is clear that the basic trend in manufacturing industries is itself changing So it is quite obvious that the practice of traditional economic analysis methods should change too This book is an attempt to address the various issues associated with non traditional methods for evaluation of advanced computer integrated technologies This volume consists of twenty refereed articles which are grouped into five parts Part one Economic Justification Methods consists of six articles In the first paper Soni et al present a new classification for economic justification methods for advanced automated manufacturing systems In the second Henghold and LeClair look at strengths and weaknesses of expert systems in general and more specifically an application aimed at investment justification in advanced technology The third paper by Carrasco and Lee proposes an enhanced economic methodology to improve the needs analysis conceptual design and detailed design activities associated with technology modernization

**Advances in Manufacturing Technology II** Peter F. McGoldrick, 2013-11-21 EN Corlett Joint Chairman COPED University of Nottingham Nottingham UK

The contributions offered to this Third National Conference demonstrate that research in production is very much alive The considerable numbers of papers on robotics automation and flexible manufacturing systems together with those in production control and quality matters demonstrate that there is much work going on in our colleges polytechnics and universities related to modern methods of manufacture The future of manufacture undoubtedly hinges on better control Control over the supply and movement of materials is now keenly sought Control over manufacturing equipment is also a goal not just to maintain quality but to give flexibility in sequence and quantity None of these objectives for improved performance is entirely a technical matter although there is an increasing technical ability to influence all of them To achieve their potential they depend on competent people at all levels Discussion with alert managers soon reveals that this is one of their major concerns Either the people they have require more training or they cannot hire the people with the abilities they need This applies at all levels and the availability of people with competence in manufacture is particularly low

**Selection and Evaluation of Advanced Manufacturing Technologies** Matthew J. Liberatore, 1990 Matthew J Liberatore Department of Management Villanova University Villanova PA 19085 1

**BACKGROUND** The weakening competitive position

of many segments of u s manufacturing has been analyzed debated and discussed in corporate boardrooms academic journals and the popular literature One result has been a renewed commitment toward improving productivity and quality in the workplace The drive to reduce manufacturing related costs while meeting ever changing customer needs has led many firms to consider more automated and flexible manufacturing systems The extent to which these new technologies can support business goals in productivity quality and flexibility is an especially important issue for manufacturing firms in the u s and other Western nations Problems have arisen in developing performance measures and evaluation criteria which reflect the full range of costs and benefits associated with these technologies Some would argue that managerial policies and attitudes and not the shortcomings of the equipment or manufacturing processes are the major impediments to implementation Kaplan 1984     **Advanced manufacturing systems** Springer-Verlag,1987
