Expert System Applications Leonard Bolc, Michael J. Coombs, 2012-12-06 While expert systems technology originated in the United States its development has become an international concern Since the start of the DENDRAL project at Stanford University over 15 years ago with its objective of problem solving via the automation of actual human expert knowledge significant expert systems projects have been completed in countries ranging from Japan to France Spain to China This book presents a sample of five such projects along with four substantial reports of mature studies from North American researchers Two important issues of expert system design permeate the papers in this volume The first concerns the incorporation of substantial numeric knowledge into a system This has become a significant focus of work as researchers have sought to apply expert systems technology to complex real world domains already subject to statistical or algebraic description and handled well at some level in numeric terms A second prominent issue is that of representing control knowledge in a manner which is both explicit and thus available for inspection and compatible with the semantics of the problem domain
