## **Developing Cognitive Competence New Approaches To Process Modeling:**

Developing Cognitive Competence Tony J. Simon, Graeme S. Halford, 2015-05-15 Although computational modeling is now a widespread technique in cognitive science and in psychology relatively little work in developmental psychology has used this technique The approach is not entirely new as a small group of researchers has attempted to create computational accounts of cognitive developmental phenomena since the inception of the technique It should seem obvious that transition mechanisms or how the system progresses from one level of competence to the next ought to be the central question for investigation in cognitive developmental psychology Yet if one scans the literature of modern developmental studies it appears that the question has been all but ignored However only recently have advances in computational technology enabled the researcher access to fully self modifying computer languages capable of simulating cognitive change By the beginning of the 1990s increasing numbers of researchers in the cognitive sciences were of the opinion that the tools of mathematical modeling and computer simulation make theorizing about transition mechanisms both practical and beneficial by using both traditional symbolic computational systems and parallel distributed processing or connectionist approaches Computational models make it possible to define the processes that lead to a system being transformed under environmental influence from one level of competence observed in children to the next most sophisticated level By coding computational models into simulations of actual cognitive change they become tangible entities that are accessible to systematic study Unfortunately little of what has been produced has been published in journals or books where many professionals would easily find them Feeling that developmental psychologists should be exposed to this relatively new approach a symposium was organized at the biennial meeting of the Society for Research in Child Development The cost of entry was that speakers had to have a running computational model of a documented cognitive transition Inspired by that conference this volume is the first collection where each content chapter presents a fully implemented self modifying simulation of some aspect of cognitive development Previous collections have tended to discuss general approaches less than fully implemented models or non self modifying models Along with introductory and review chapters this volume presents a set of truly developmental computational models a collection that can inform the interested researcher as well as form the basis for graduate level courses

**Conceptual Development** Ellen Kofsky Scholnick, Katherine Nelson, Susan A. Gelman, Patricia H.
