Microsystems are an important factor that contribute to an automobile model's success. To meet the customer's desire for safety, convenience, and vehicle economy and to satisfy environmental standards, microsystems are the critical factor. Microsystems applications (MST) have already resulted in improved performance and better value for money. But the advances implemented reveal only the beginning of a revolution in the vehicle sector which aims at a complete transition from the mechanically driven automobile system to a mechanically based but ICT driven system. The selected contributions from AMAA 2003 treat safety both preventive and protective, powertrain, online measurement and control of engine and transmission subsystems, comfort and HMI systems to enhance the comfort of passengers and human machine interface issues, and networked Vehicle all aspects of intra car systems and ambient communication networks. Selected proceedings for the seventh conference on microsystems in the automotive sector, a regular event now with an increasing number of participants on a modern and promising field taking place in Berlin in May 2003.

Advanced Microsystems for Automotive Applications 2000 Sven Krüger, Wolfgang Gessner, 2000-04-05

Microsystems are an important success factor in the automobile industry. In order to fulfil the customer's requests for safety, convenience, and vehicle economy and to satisfy environmental requirements, microsystems are becoming indispensable. Thus a large number of microsystem applications came into the discussion. With the international conference AMAA 2000 VDI VDE IT provides a platform for the discussion of all MST relevant components for automotive applications. The conference proceedings gather the papers by authors from automobile suppliers and manufacturers.

Advanced Microsystems for Automotive Applications 2004 Jürgen Valldorf, Wolfgang Gessner, 2007-12-22

Microsystems applications (MST) in automobiles have become commonplace; they enable the introduction of a series of new functions and at the same time the replacement of existing technologies offering improved performance and better value for money. Microsystems are indispensable for fulfilling a complete transition from the mechanically driven automobile system to a mechanically based but ICT driven system as part of a likewise complex environment. With the introduction of micro systems a series of challenges arise regarding complexity, systems design, reliability, serviceability, etc. These challenges have to be addressed in order to meet high customer expectations concerning performance and price.

Gessner,2006-07-31 Looking back 10 years when the International Forum on Advanced Microsystems for Automotive
Application AMAA started enormous progress has been made in reducing casualties emissions and in increasing comfort and
performance Microsystems in many cases provided the key functions for this progress Although the issues the event
concentrated on didn't change significantly safety powertrain comfort etc considerable shifts of technological paradigms and
approaches can be stated The future of microsystems will consist of integrated smart systems which are able to diagnose a
situation to describe and to qualify it They will be able to identify and mutually address each other They will be predictive
and therefore they will be able to decide and help to decide Smart systems will enable the automobile to interact with the
environment they will perform multiple tasks and assist a variety of activities Smart systems will be highly reliable often
networked and energy autonomous There is a coincidence of the AMAA objectives and those of EPoSS the European
Technology Platform on Smart Systems Integration contributing intensively to the development of automotive specific smart
systems You will find a series of the EPoSS items in the programme of the 10th AMAA which continues to be a unique
exchange forum for companies in the automotive value chain The publication in hand also reflects these issues It is a cut out
of new technological priorities in the area of microsystems based smart devices and opens up a mid term perspective of
future smart systems applications in automobiles Additional information is available on www.amaa.de **Advanced
