Advances in Computers ,1988-07-01 **Advances in Computers** **Finite Automata and Application to Cryptography** Renji Tao,2009-03-08 Finite Automata and Application to Cryptography mainly deals with the invertibility theory of finite automata and its application to cryptography In addition autonomous finite automata and Latin arrays which are relative to the canonical form for one key cryptosystems based on finite automata are also discussed

Finite automata are regarded as a natural model for ciphers The Ra Rb transformation method is introduced to deal with the structure problem of such automata then public key cryptosystems based on finite automata and a canonical form for one key ciphers implementable by finite automata with bounded error propagation and without data expansion are proposed The book may be used as a reference for computer science and mathematics majors including seniors and graduate students Renji Tao is a Professor at the Institute of Software Chinese Academy of Sciences Beijing **Advances in Computer, Information, and Systems Sciences, and Engineering** Khaled Elleithy, Tarek Sobh, Ausif Mahmood, Magued Iskander, Mohammad A. Karim, 2007-06-06 The conference proceedings of International Conference on Industrial Electronics Technology not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 50 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session The implemented conferencing technology starting with the submission review system and ending with the online conferencing capability allowed CISSE to conduct a very high quality fulfilling event for all participants See www.cissee2005.org sections IETA TENE EIAE
