**Progress in Artificial Intelligence** Pedro Barahona, Jose J. Alferes, 2003-07-31

The Portuguese Association for Artificial Intelligence APPIA has been regularly organising the Portuguese Conference on Artificial Intelligence EPIA This ninth conference follows previous ones held in Porto 1985 Lisboa 1986 Braga 1987 Lisboa 1989 Albufeira 1991 Porto 1993 Funchal 1995 and Coimbra 1997 Starting in 1989 the conferences have been held biennially alternating with an APPIA Advanced School on Artificial Intelligence and become truly international English has been adopted

as the official language and the proceedings are published in Springer's LNAI series. The conference has reconformed its high international standard this year largely due to its programme committee composed of distinguished researchers in a variety of specialities in Artificial Intelligence, half of them from Portuguese universities. This has attracted a significant international interest well expressed by the number of papers submitted: 66 from 17 different countries, 29 of which are by Portuguese researchers. From the 66 papers submitted, about one third of them, 23, were selected for oral presentation and have been published in this volume. The review process enabled the selection of high quality papers, each paper being reviewed by two or three reviewers, either from the programme committee or by their appointment. We would like to thank all of the reviewers for their excellent and hard work.

**Advanced Logic Programming for Language Processing** Patrick Saint-Dizier, 1994  
 For twenty years unification and rewriting have played a major role in the modeling of linguistic phenomena. More recently notions of types as in typed feature systems and constraints have emerged and are now extensively used in theoretical computational linguistics and the development of applications. Recent developments in the area of logic programming such as new compilation techniques, constraints, object-oriented programming and higher order programming coincide perfectly with the needs of computational linguistics. Moreover logic programming offers a well defined theoretical framework whose computational properties are well identified and are efficient to operate. **Advanced Logic Programming for Language Processing** covers the main advanced features of logic programming. Each feature is introduced step by step and its use for natural language processing is studied in detail. A large number of programs illustrate the advantages and current limitations of each feature. This book is essential reading for advanced undergraduates and graduates in computational linguistics and cognitive science. It will also interest engineers involved in the development of natural language techniques.

**Coding Theory and Applications** Gérard Cohen, Jacques Wolfmann, 1989-09-20  
 A rich source of information about human voluntary movement in health and disease can be found in this book. The most esteemed researchers in their respective fields bring you up to date articles. Their collected work combines fundamental research in the life sciences with clinical neuroscience in a unique overview. The interdisciplinary aspects of motor physiology uncover a wealth of information for researchers from neighboring disciplines. For example, oculomotor research, vestibular research, equilibrium, sensory research and cognition, evolution, synaptic and elementary processes and the neurological sciences can be discovered.

**Algebraic Methods: Theory, Tools and Applications** Martin Wirsing, Jan A. Bergstra, 1989-09-20  
*Partial Evaluation: Practice and Theory* John Hatcliff, Torben Mogensen, Peter Thiemann, 2007-07-16  
 As the complexity of software increases, researchers and practitioners continue to seek better techniques for engineering the construction of evolution of software. Partial evaluation is an attractive technology for modern software construction since it provides automatic tools for software specialization and is based on rigorous semantic foundations. This book is based on a school held at DIKU Copenhagen, Denmark, in summer 1998, during which leading researchers summarized the state of the art in partial evaluation. The lectures presented survey

the foundations of partial evaluation in a clear and rigorous manner and practically introduce several existing partial evaluators with numerous examples The second part of the book is devoted to more sophisticated theoretical aspects advances systems and applications and highlights open problems and challenges The book is ideally suited for advanced courses and for self study
