Codes, Designs and Geometry Vladimir Tonchev, 2012-12-06 *Codes Designs and Geometry* brings together in one place important contributions and up to date research results in this important area *Codes Designs and Geometry* serves as an excellent reference providing insight into some of the most important research issues in the field *Designs and Their Codes* E. F. Assmus, J. D. Key, 1994-01-06 A self contained account suited for a wide audience describing coding theory combinatorial designs and their relations *LDPC Code Designs, Constructions, and Unification* Juane Li, Shu Lin, Khaled Abdel-Ghaffar, William E. Ryan, Daniel J. Costello, Jr, 2016-12-01 Written by leading experts this self contained text provides systematic coverage of LDPC codes and their construction techniques unifying both algebraic and graph based approaches into a single theoretical framework the superposition construction An algebraic method for constructing protograph LDPC codes is described and entirely new codes and techniques are presented These include a new class of LDPC codes with doubly quasi cyclic structure as well as algebraic methods for constructing spatially and globally coupled LDPC codes Authoritative yet written using accessible language this text is essential reading for electrical engineers computer scientists and mathematicians working in communications and information theory *Designs from Linear Codes* Cunsheng Ding, Chunming Tang, 2022 Since the publication of the first edition of this monograph a generalisation of the Assmus Mattson theorem for linear codes over finite fields has been developed two 70 year breakthroughs and a considerable amount of other progress on t designs from linear codes have been made This second edition is a substantial revision and expansion of the first edition Two new chapters and two new appendices have been added and most chapters of the first edition have been revised It provides a well rounded and detailed account of t designs from linear codes Most chapters of this book cover the support designs of linear codes A few chapters deal with designs obtained from linear codes in other ways Connections among ovals hyperovals maximal arcs ovoids special functions linear codes and designs are also investigated This book consists of both classical and recent results on designs from linear codes It is intended to be a reference for postgraduates and researchers who work on combinatorics or coding theory or digital communications or finite geometry It can also be used as a textbook for postgraduates in these subject areas *Graphs, Codes and Designs* P. J. Cameron, J. H. van Lint, 1980-07-31 This book is concerned with the relations between graphs error correcting codes and designs in particular how techniques of graph theory and coding theory can give information about designs A major revision and expansion of a previous volume in this series this account includes many examples and new results as well as improved treatments of older material So that non specialists will find the treatment accessible the authors have included short introductions to the three main topics This book will be welcomed by graduate students and research mathematicians and be valuable for advanced courses in finite combinatorics **Designs From Linear Codes** Ding Cunsheng, 2019 This monograph aims to provide a well rounded and detailed account of designs using linear codes Most chapters of this monograph cover on the designs of

linear codes A few chapters deal with designs obtained from linear codes in other ways Connections among ovals hyperovals maximal arcs ovoids linear codes and designs are also investigated This book consists of both classical results on designs from linear codes and recent results yet published by others This monograph is intended to be a reference for postgraduates and researchers who work on combinatorics or coding theory or digital communications or finite geometry
