   A Comparative Study of Parallel Programming Languages: The Salishan Problems J.T. Feo,2016-01-22 As execution speeds reach the physical limits of single cpu computers the only hope of achieving greater computing power is with parallel systems Researchers have proposed countless new programming languages but their differences similarities strengths weaknesses and problem domains are subtle and often not well understood Informed comparison of parallel languages is difficult This volume compares eight parallel programming languages based on solutions to four problems Each chapter includes a description of the language s philosophy semantics and syntax and a solution to each problem By considering solutions rather than language features or theoretical properties the gap is bridged between the language specialists and users Both professionals and students in the fields of computer and computational science will find the discussions helpful and understandable   **A Comparative Study of Five Parallel Programming Languages** H. Cummings,1993 This paper provides a comparative analysis of the two parallel programming models the shared memory model and distributed memory model The project focused on the claims by some researchers that distributed programming model programs outperform shared programming model programs on shared memory machines The matrix multiply algorithm was chosen and parallel versions for the shared memory and distributed memory model were implemented using the C and P4 programming languages Experiments were conducted using the Sequent Encore and Butterfly shared memory MIMD parallel processing machines located at Argonne National Laboratory Timing data was plotted comparing each model for multiple runs using from one to twenty processors The results of the experiments show that the shared programming model significantly outperformed the distributed programming model on all three machines Author s abstract Comparing and Assessing Programming Languages Alan R. Feuer,Narain Gehani,1984 This book explores the topic of programming language comparison and assessment by closely examining the popular languages Ada C and Pascal The chapters are written by experts in the field of programming languages and compare and contrast the three languages assessed This book is designed to enhance knowledge of these languages by assisting in assessing which language is best suited to a particular application
