Complex Algebraic Surfaces:

   Complex Algebraic Surfaces Arnaud Beauville,1996-06-28 Developed over more than a century and still an active area of research today the classification of algebraic surfaces is an intricate and fascinating branch of mathematics In this book Professor Beauville gives a lucid and concise account of the subject following the strategy of F Enriques but expressed simply in the language of modern topology and sheaf theory so as to be accessible to any budding geometer This volume is self contained and the exercises succeed both in giving the flavour of the extraordinary wealth of examples in the classical subject and in equipping the reader with most of the techniques needed for research   Complex Algebraic Surfaces Arnaud Beauville,1983   Complex Algebraic Surfaces Arnaud Beauville,2014-05-14 A lucid and concise account of the classification of algebraic surfaces   *Classification of Complex Algebraic Surfaces* Ciro Ciliberto,2020   Complex Algebraic Surfaces A. Beauville,1983-09-08   **Algebraic Surfaces** Lucian Badescu,2013-03-14 The aim of this book is to present certain fundamental facts in the theory of algebraic surfaces defined over an algebraically closed field lk of arbitrary characteristic The book is based on a series of talks given by the author in the Algebraic Geometry seminar at the Faculty of Mathematics University of Bucharest The main goal is the classification of nonsingular projective surfaces also called simply surfaces In the context of complex algebraic varieties the classification was obtained by Enriques and Castelnuovo Around 1960 Kodaira Kodl Kod2 revived and simplified the classification of complex algebraic surfaces and extended it to the case of compact analytic surfaces The problem of classifying surfaces in arbitrary characteristic remained open The first step in this direction was the purely algebraic proof valid in arbitrary characteristic due to Zariski Zarl Zar2 of Castelnuovo s criterion of rationality Then Mumford Mum3 Mum4 introduced several new ideas and the classification of surfaces in positive characteristic be came possible Finally Bombieri and Mumford BMl BM2 completed the classification of surfaces in arbitrary characteristic Their result was the following The same types of surfaces that exist in the case when lk is the complex field arise in the general case if one sets aside certain pathologies that arise only in characteristic 2 or 3   Theory of Algebraic Surfaces Kunihiko Kodaira,2020-09-17 This is an English translation of the book in Japanese published as the volume 20 in the series of Seminar Notes from The University of Tokyo that grew out of a course of lectures by Professor Kunihiko Kodaira in 1967 It serves as an almost self contained introduction to the theory of complex algebraic surfaces including concise proofs of Gorenstein s theorem for curves on a surface and Noether s formula for the arithmetic genus It also discusses the behavior of the pluri canonical maps of surfaces of general type as a practical application of the general theory The book is aimed at graduate students and also at anyone interested in algebraic surfaces and readers are expected to have only a basic knowledge of complex manifolds as a prerequisite   **Algebraic Surfaces** Lucian Silvestru Badescu,2014-01-15

Beauville,1983-09-08 **Donaldson Type Invariants for Algebraic Surfaces** Takuro Mochizuki,2009-04-20 In this monograph we de ne and investigate an algebro geometric analogue of Donaldson invariants by using moduli spaces of semistable sheaves with arbitrary ranks on a polarized projective surface We may expect the existence of interesting universal relations among invariants which would be a natural generalization of the wall crossing formula and the Witten conjecture for classical Donaldson invariants Our goal is to obtain a weaker version of such relations in other brief words to describe a relation as the sum of integrals over the products of m uli spaces of objects with lower ranks Fortunately according to a recent excellent work of L Gottsche H Nakajima and K Yoshioka 53 a wall crossing formula for Donaldson invariants of projective surfaces can be deduced from such a weaker result in the rank two case We hope that our work in this monograph would at least tentatively provides a part of foundation for the further study on such universal relations In the rest of this preface we would like to explain our motivation and some of important ingredients of this study See Introduction for our actual problems and results Donaldson Invariants Let us brie y recall Donaldson invariants We refer to 22 for more details and precise We also refer to 37 39 51 and 53 LetX be a compact simply con nected oriented real 4 dimensional C manifold with a Riemannian metric g Let P be a principalSO 3 bundle on X *Complex Algebraic Geometry* János Kollár,1997 Lecture notes from the Third Summer Session of the Regional Geometry Institute held in Park City Utah in 1993 **Algebraic Geometry II** I.R. Shafarevich,1995-12-21 This two part volume contains numerous examples and insights on various topics The authors have taken pains to present the material rigorously and coherently This book will be immensely useful to mathematicians and graduate students working in algebraic geometry arithmetic algebraic geometry complex analysis and related fields Encyclopedia of Analytical Surfaces S.N. Krivoshapko,V.N. Ivanov,2015-02-25 This encyclopedia presents an all embracing collection of analytical surface classes It provides concise definitions and description for more than 500 surfaces and categorizes them in 38 classes of analytical surfaces All classes are cross references to the original literature in an excellent bibliography The encyclopedia is of particular interest to structural and civil engineers and serves as valuable reference for mathematicians The Wild World of 4-Manifolds Alexandru Scorpan,2022-01-26 What a wonderful book I strongly recommend this book to anyone especially graduate students interested in getting a sense of 4 manifolds MAA Reviews The book gives an excellent overview of 4 manifolds with many figures and historical notes Graduate students nonexperts and experts alike will enjoy browsing through it Robion C Kirby University of California Berkeley This book offers a panorama of the topology of simply connected smooth manifolds of dimension four Dimension four is unlike any other dimension it is large enough to have room for wild things to happen but small enough so that there is no room to undo the wildness For example only manifolds of dimension four can exhibit infinitely many distinct smooth structures Indeed their topology remains the least understood today To put things in context the book starts with a survey of higher dimensions and

of topological 4 manifolds In the second part the main invariant of a 4 manifold the intersection form and its interaction with the topology of the manifold are investigated In the third part as an important source of examples complex surfaces are reviewed In the final fourth part of the book gauge theory is presented this differential geometric method has brought to light how unwieldy smooth 4 manifolds truly are and while bringing new insights has raised more questions than answers The structure of the book is modular organized into a main track of about two hundred pages augmented by extensive notes at the end of each chapter where many extra details proofs and developments are presented To help the reader the text is peppered with over 250 illustrations and has an extensive index **Complex Analysis and Algebraic Geometry** Kunihiko Kodaira,W. L. Jr Baily,T. Shioda,1977 The articles in this volume cover some developments in complex analysis and algebraic geometry The book is divided into three parts Part I includes topics in the theory of algebraic surfaces and analytic surface Part II covers topics in moduli and classification problems as well as structure theory of certain complex manifolds Part III is devoted to various topics in algebraic geometry analysis and arithmetic A survey article by Ueno serves as an introduction to the general background of the subject matter of the volume The volume was written for Kunihiko Kodaira on the occasion of his sixtieth birthday by his friends and students Professor Kodaira was one of the world s leading mathematicians in algebraic geometry and complex manifold theory and the contributions reflect those concerns **Real Algebraic Surfaces** Robert Silhol,2006-11-14 **Smooth Four-Manifolds and Complex Surfaces** Robert Friedman,John W. Morgan,1994-03-10 In 1961 Smale established the generalized Poincare Conjecture in dimensions greater than or equal to 5 129 and proceeded to prove the h cobordism theorem 130 This result inaugurated a major effort to classify all possible smooth and topological structures on manifolds of dimension at least 5 By the mid 1970 s the main outlines of this theory were complete and explicit answers especially concerning simply connected manifolds as well as general qualitative results had been obtained As an example of such a qualitative result a closed simply connected manifold of dimension 2 5 is determined up to finitely many diffeomorphism possibilities by its homotopy type and its Pontrjagin classes There are similar results for self diffeomorphisms which at least in the simply connected case say that the group of self diffeomorphisms of a closed manifold M of dimension at least 5 is commensurate with an arithmetic subgroup of the linear algebraic group of all automorphisms of its so called rational minimal model which preserve the Pontrjagin classes 131 Once the high dimensional theory was in good shape attention shifted to the remaining and seemingly exceptional dimensions 3 and 4 The theory behind the results for manifolds of dimension at least 5 does not carryover to manifolds of these low dimensions essentially because there is no longer enough room to maneuver Thus new ideas are necessary to study manifolds of these low dimensions **Algebraic Geometry I** V.I. Danilov,V.V. Shokurov,2006-12-15 To sum up this book helps to learn algebraic geometry in a short time its concrete style is enjoyable for students and reveals the beauty of mathematics Acta Scientiarum Mathematicarum **Geometric Modeling with Algebraic Surfaces** Chanderjit Bajaj,1988
